The real scandal is the effect of lockdown & NHS focus on Covid19 at cost to many other services. This is why the excess deaths that aren't Covid19 have happened, possibly 20,000 avoidable deaths. And idiots like you want more of it. I despair, I really do.

The idea that Leicester is being 'targeted' is nonsense.

The rate of infection is the issue.

If 100 people anywhere else in the UK were to be tested, 2 would test positive. In Leicester, that figure is 10. Action is regrettable but necessary to keep people in Leicester safe.

The only way a pandemic ends is when it runs out of susceptible people to infect. Even if we assume 'local lockdown' will slow transmission (I think the evidence speaks against that), no one is saved thereby. It just extends the period until we declare ourselves virus free.

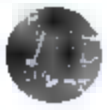
This is pretty astounding if correct. Would mean CFR=0,1-0,15%?

2 8

el gato malo @boriquagato · 17h

i think you may mean IFR, but yes.



this is supported by work at CDC as well.

they pegged symptomatic case fatality ratio at 0.4%.

with ~70% asymptomatic, that's IFR of ~0.12% in line with a baddish, but not a truly nasty flu.

Symptomatic Case Fatality Ratio, stratified by age in years Source: Preliminary COVID-19 estimates, CDC	0-49: 0.0002	0-49: 0.0002	0-49: 0.001	0-49: 0.001	0-49: 0.0005

Why do people think anecdote is the same as data?
It isn't.
Those providing medical care to the many with covid19 haven't, in the main, cared for influenza patients because we hospitalise far fewer. SARS-Cov-2 shows every sign of being a fairly ordinary, if novel, virus.

flatten curve meant.

1 1

el gato malo @boriquagato · 11h

ICU's are not full in any county in the US right now and can easily flex capacity up 50-100%

this idea that the US is running out of hospital space, even regionally is untrue

there are a lot of scare stories, but the data does not support them.

ICU at 80-90% capacity is normal

1 3 7

Hans Mahncke @HansMahncke · 10h

Panic porn would be a lot less destructive if there wasn't so much ignorance. It feels like vast parts of the media actually think that hospitals maintain huge ICU units as vanity projects.

1 7

Cathy Smith @CathySmithnoaa · 8h

That was certainly not true in Italy and parts of Europe. In NYC one could argue people died because hospitals were too crowded and patients got there too late or were picked up to late. ICUs are flexible somewhat but that is at the expense of some other medical services and care

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @CathySmithnoaa @HansMahncke and 4 others

In Italy, I'm afraid it's quite common to run out of ICU beds each winter. They have a large population of very elderly people.

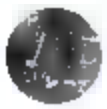
i think you may mean IFR, but yes.

this is supported by work at CDC as well.

they pegged symptomatic case fatality ratio at 0.4%.

with ~70% asymptomatic, that's IFR of ~0.12% in line with a baddish, but not a truly nasty flu.



Symptomatic Case Fatality Ratio, stratified by age in years Source: Preliminary COVID-19 estimates, CDC	0-49: 0.0002	0-49: 0.0002	0-49: 0.001	0-49: 0.001	0-49: 0.0005
	50-64: 0.001	50-64: 0.001	50-64: 0.006	50-64: 0.006	50-64: 0.002
	65+: 0.005	65+: 0.006	65+: 0.032	65+: 0.032	65+: 0.013

Genuinely hard to know. The only way to be sure was massed testing for virus in a representative sample. Afterwards, impossible to know how many had been infected. Not everyone seroconverts.

There are now too few susceptible people for U.K. to now experience a second wave. It doesn't matter how we release lockdown. Have a street party. It'll make little to no difference now. Nb: such has already happened; made no difference. Powerful evidence for my interpretation.

Shaz @SharonHarlingto · 2h
How do you possibly work that out?

Naz Shah MP @NazShahBfd · 3h

It saddens me that despite writing to the editor of the Telegraph days ago asking for this headline to be amended, it still stands.

Each moment such headlines exist, conspiracies about minority communities being a threat to this country continue.

Exclusive: Half of UK's imported Covid-19 infections are from Pakistan

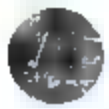
Graham Sanders @GrahamSanders9 · 8h

I don't think that is correct Leicester is in lockdown

1

Yardley Yeadon @MichaelYeadon3 · 7h

I know that.
I was responding to your fear that the virus would reinfect the land. It won't as it cannot. New data out confirms what I've thought for months: we're knocking on the door of herd immunity.



2

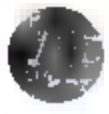
Gareth Evans @HashtagCarlton · 4h

What's your background in pandemics?

3

Yardley Yeadon @MichaelYeadon3 · 3h

The fact that you believe that's the key skill speaks volumes.
This requires a multidisciplinary Understanding of several strands of science, plus ability to make reasoned guesses at the gaps. I'm good at all of these, thanks :)
But luckily, I don't mind if you are sceptical :)



3 1

Gareth Evans @HashtagCarlton · 3h

Self praise is no recommendation.

Mark Stewart @TheMarkBStewart · Jun 15
Thanks to our membership of the EU, we currently have very good food and animal welfare standards in the UK. It is absolutely inconceivable and unacceptable that we should take a backwards step and accept lower standards. #SaveFoodStandards

19 16 67

The Sandy Laner @TheSandyLaner1 · Jun 15
Yeh, I remember those 'steak' pies produced under EU food standards.
They actually contained horse meat.
None of this will affect me as I only buy British food.

Each of those are one unit, aren't they? Long ago, hundreds of years ago, they chose to recognise each other as belonging to one whole unit. Those subdivisions are internal & are different in kind from the units in the EU. My earlier post stands without rebuttal, even by EU fans.

LITTLE england BANANA monarchy @Superbusinesz · Jun 26
Are you scared?
Remainers are here to stay.
We keep growing.
Remain is at 56%

6 3

Yardley Yeadon @MichaelYeadon3 · Jun 28
That's the value Remain had before the 2016 campaign got under way. It's not indicative of a greater wish now to be in the EU than it was then.
Most don't crow about being in the same place now as they were before last time, being beaten in the actual event.

LITTLE england BANANA monarchy @Superbusinesz · 4h
Kantar did the poll.
The same that predicted johnson's victory in 2019

1

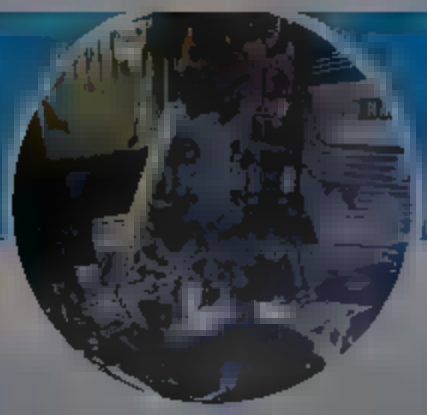
@MichaelYeadon3

Follow

Replying to @Superbusinesz @thepigserrol and 4 others



Nevertheless, Remain led until well into the campaign. So the 'lead' now doesn't mean a vote, if held again after a vigorous campaign, would be won by Remain.
The fact that a pollster who did well recently in an unrelated poll does not confer magical properties on this poll.

Also, do not assume you are the knower. The public know more about this fake pandemic then you are prepared to admit. We are seething here with anger at what you & your govt has done to us.

13 15 143

Yardley Yeadon @MichaelYeadon3 · Jun 29

The ultimate irony is people complaining "this shit Govt locked down too late" (that's why we've had so many deaths..).
It's ironic, because SAGE never discussed, let alone recommended, lockdown. Govt did it all by itself, as a political act. And this saved no one & killed many.

1 2 4

David-T @dee_do_good3 · Jun 30

Look up how many deaths there were in 2016 from flue even you will be surprised at the national figures yes and another figure on average between between 40,000 and 60,000 die of winter flue every year and 600,000 actually get it and we have a vaccine for that.

1 1 2

Yardley Yeadon @MichaelYeadon3 · Jun 30

In what way is that a reply to my comment about lockdown?
I agree with you about influenza, what about it? The vaccines are often of poor efficacy. This new virus will eventually be shown to have very similar lethality except it spares children. It's less societally bad that flu.

Leicester is being wrongly locked down. The so-called significantly affected kids is incorrect. Looks like 10 cases per day, ie infections confirmed by PCR. But kids are rarely made ill, let alone die. There have been multiple 1000s of infections with no serious illness.

David Paton @cricketwyvern
Matt Hancock said that children had been significantly affected.
This is the age breakdown of cases (only goes up to 24 June).

Prioritisation is done almost everywhere & results in limited healthcare resources applied in ways that maximise benefits. Sounds horrible, but I recall my dad (a doctor in the USA) telling me that 80% of lifetime healthcare resource use occurs in the last few months of life.

Of course. Lockdown slows transmission down which is this whole flattening the curve thing was all about but that seems to be forgotten on the way.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Adm2317 @AlistairHaimes

What you say sounds wholly sensible, but in practise I don't think the evidence supports it. Our lockdown is so leaky that it doesn't much slow transmission, which continued at pace through April & May. Ive seen it argued that hospitals have been major transmission routes.

BC 100% UK Independence @BrionneCranlei1 · 42m

To be honest, much as I hate masks, I think they do make a difference.
I worked a long time ago in Japan and people there were in the habit of wearing a mask for every cold they picked up.
It seems that SE Asian countries all have this habit and have far fewer deaths per million.

1

Helen Trying to keep sane ... @errjustsaying · 39m

Do you think by not sharing germs it decreases immunity?

1

BC 100% UK Independence @BrionneCranlei1 · 23m

Debatable.
Japanese women have one of the longest lifespans of anyone in the world.

1

Helen Trying to keep sane ... @errjustsaying · 20m

Is that from their diet and lifestyle though? I'd prefer a shorter life with no mask!!

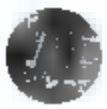
Of course. Lockdown slows transmission down which is this whole flattening the curve thing was all about but that seems to be forgotten on the way.

1



Yardley Yeadon @MichaelYeadon3 · 53m
What you say sounds wholly sensible, but in practise I don't think the evidence supports it. Our lockdown is so leaky that it doesn't much slow transmission, which continued at pace through April & May. Ive seen it argued that hospitals have been major transmission routes.

1 3

Alex @Adm2317 · 19m
While there is clearly a natural pattern, the UK infection rate has gone down slower in comparison to other European countries. Which have removed lockdown restrictions a lot quicker than the UK has done.

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Adm2317 @AlistairHaimes

That's true. Any theories?
I'm wondering if, because U.K. was so very heavily 'seeded' with infected people early on in the pandemic, we're proceeding almost literally to the last man, women & child?
Our reward after all our suffering may well be herd immunity.

I think they hold more responsibility for those people than does the average taxpayer. The latter mostly doesn't benefit from this slice of culture. The former make a ton of money out of those peripatetic workers. No, I don't want to bail them out. Limited resources=priorities.

In what way is that a reply to my comment about lockdown?
I agree with you about influenza, what about it? The vaccines are often of poor efficacy. This new virus will eventually be shown to have very similar lethality except it spares children. It's less societally bad that flu.

What it implies is that the infection fatality ratio is even lower than we thought. If it's 1:1000 instead of 1:500, then we've had 44,000,000 infections in uk & we are all but at herd immunity.

1

Ned Nikolov, Ph.D. @NikolovScience · 17s

Yes, I know that more cases bring down the fatality rate, but this is NOT at all how this is been portrayed by the media. The emphasis is on the "rapid spread" of the virus and the "need" to close again the economy in some parts of the country. It's all about fear mongering!

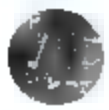
Cathy Smith @CathySmithnoaa · Jun 29
That was certainly not true in Italy and parts of Europe. In NYC one could argue people died because hospitals were too crowded and patients got there too late or were picked up to late. ICUs are flexible somewhat but that is at the expense of some other medical services and care

1 1



Yardley Yeadon @MichaelYeadon3 · Jun 30
In Italy, I'm afraid it's quite common to run out of ICU beds each winter. They have a large population of very elderly people.

1

Cathy Smith @CathySmithnoaa · 10h
If you look at deaths above normal it was much higher in Italy early this year compared to other years. It is very doubtful people would have tolerated closures if deaths had been the same as a normal year. People knew the people who were dying.

1

Yardley Yeadon
@MichaelYeadon3

Replying to @CathySmithnoaa @HansMahncke and 4 others

I agree. I wouldn't want anyone to take from my tweets that I don't recognise this as a lethal threat to the old & ill, no question. Nevertheless, they do sometimes, briefly, exceed ICU capacity. Obviously, not for weeks on end! It's just that the ICU point needs qualifying.

For those not versed in statistics, 60,000 excess deaths is quite a lot

1 4

Richard Vadon @richardvadon · 3h
Have you listened to @BBCMoreOrLess lately?

2

David Colquhoun @david_colquhoun · 3h
If you are going to make the obvious point that not all of the excess deaths died from COVID, it's nevertheless true that an earlier lockdown would have reduced them, as well as those attributable directly to COVID

1

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @david_colquhoun @richardvadon and 2 others

I don't accept that an earlier lockdown would have saved tens of thousands of lives. No knowledgeable professional in this field can show that their assertion is correct. The timing of the intervention vs peak number of infections & deaths do not work.

Alistair Haimes @AlistairHaimes · 14h
For those who don't deal with statistics every day, 0.04% is "bugger all"

Office for National Statistics (ONS) @ONS
At any given time between 14 and 27 June 2020, we estimate that an average 0.04% of people not in care homes, hospitals or other institutional settings in England would test positive for #COVID19.

Show this thread

31 215 553

Replying to @Jim24049160 @AlistairHaimes

At this stage, sadly, I think it's likely that the long, thin 'tail' of covid19 deaths in hospitals will have resulted from nosocomial infection, not community.

I now no longer trust the program.

The host slid over the disconnect between peak deaths, interpolated peak infections & lockdown dates, pretending they're consistent with the claimed efficacy of lockdown, when they are not. Turning point was at least a week too early.

cases are in the general population, where COVID has no bite. The "spike" started in early June. People should be dying in droves, according to "the experts." Instead, we see record lows in deaths.

I know the lockdown date: it was on that basis that it can be shown that we'd passed peak infection before lockdown.
Something else changed the infection from expanding to being in retreat. If it was mere caution then this still shows that lockdown was not the key intervention.

Happy to be tested, either for this virus, or for antibodies. You're always tested for infections before & again upon admission, mostly to protect the hospital against being sued (many serious infectious diseases are acquired in hospital).
Vaccines, an entirely separate matter.

We initially made your argument on the programme and experts told us we had made the mistake of looking at the mean not the mode. We looked at it and corrected on air. We looked at it again this week with latest research. Still think peak was just before or at lockdown

3 1

David Colquhoun @david_colquhoun · 5h
Also movement records suggest that many people locked down before March 23rd (including us -March 12th)

1

Richard Vadon @richardvadon · 5h
True. The schools were open but not many were going. A lockdown is clearly going to bring down the R rate to below 1. I think you could probably do it without a full on lockdown but it would be a long way from normality for a long time. Probably best to do it early but briefly.

3

Yardley Yeadon
@MichaelYeadon3

What's your basis for blithely assuming that "lockdown is clearly going to bring down the R rate to below 1"?
It seems to me you've assumed & internalised an unproven effect. I'm arguing that we've no evidence that community transmission between strangers was the main route.

We initially made your argument on the programme and experts told us we had made the mistake of looking at the mean not the mode. We looked at it and corrected on air. We looked at it again this week with latest research. Still think peak was just before or at lockdown

3 1

Yardley Yeadon @MichaelYeadon3 · 11m

I agree it was before. Before is utterly critical. Even if only by a few days, that fact is shouting something very, very important: forget the politics surrounding lockdown & the public health scandal that it was probably ineffective & unnecessary.
No, the really important...

...point from this analysis is that something powerful had turned the tide, such that instead of the number of infected people climbing by 500,000 per day, the rate of infection had already begun to fall, and it's been falling ever since.

What was that something?

Also movement records suggest that many people locked down before March 23rd (including us -March 12th)

1

Richard Vadon @richardvadon · 5h
True. The schools were open but not many were going. A lockdown is clearly going to bring down the R rate to below 1. I think you could probably do it without a full on lockdown but it would be a long way from normality for a long time. Probably best to do it early but briefly.

3

Yardley Yeadon @MichaelYeadon3 · 17m
What's your basis for blithely assuming that "lockdown is clearly going to bring down the R rate to below 1"?
It seems to me you've assumed & internalised an unproven effect. I'm arguing that we've no evidence that community transmission between strangers was the main route.

We know that the infection rate, while lower before lockdown than the immed. preceding weeks, was still several hundred thousands/day after lockdown. So much for the purported efficacy of lockdown. We know this because there are good estimates of IFR & we know the # of deaths.

What do you think should be incorporated in recognition this isn't flu (though it is primarily a respiratory virus) and do you think that would adjust the definition to higher or lower % of deaths (and why)?

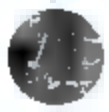
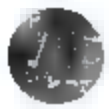
A mask doesn't stop the virus. It stops the droplets. Keep the droplets out of the air, you keep the virus out of the air.



2

Yardley Yeadon @MichaelYeadon3 · 3m

I've spent decades in the research side of creation & delivery to the central airways of the rake aerosols.
I'm afraid what the so-called experts imply or assert isn't correct. Particles small enough to be 'respirable' (5 thousandths of a mm or less) carry too little mass..



1

Yardley Yeadon @MichaelYeadon3 · 2m

... to be able to infect beyond 2m. If you're closer, you're not inhaling respirable aerosols, but swallowing droplets. Masks on the infected work because they catch spittle & mucus blobbing onto surfaces. These are then touched by a hand & thence to the nose, mouth & eyes.

More tests means more cases is why you look at percentages. @WADeptHealth has released numbers on testing since early on. doh.wa.gov/Emergencies/Co…

1

Hold2 @Hold2LLC · 27s

And deriving answers from Pos% without understanding the underlying reasons is improper. There are many reasons the Pos% can go up (or down) based on factors unrelated to spread (or contraction). Targeted testing, pre-screening, and a host of other reasons lead to Pos% increase.

Jeffrey Hulten @jhulten · 2h
We are seeing a higher positive test rate. That will most likely result in more hospitalizations, but might not result in more deaths if the patients are younger. "Not dead" is good, but four weeks of hospitalization is not.

2

Yardley Yeadon @MichaelYeadon3 · 20m
We've seen more positive tests, but there has been no public disclosure on numbers of tests conducted, beyond that they are running many more.
At this point it would probably not be supportable to say higher positive rate (in the tests performed), unless you do have the data?

1 1

Jeffrey Hulten @jhulten · 11m
More tests means more cases is why you look at percentages. @WADeptHealth has released numbers on testing since early on. doh.wa.gov/Emergencies/Co…

3

Jeffrey Hulten @jhulten · 7m
If your testing pool is representative of the population, it doesn't matter if you test 10k or 100k. The percentage won't change. Which allows the change over time to be meaningful ... more positive tests means more infection.

2

Yardley Yeadon

Absolutely agreed. Huge caveat though: routine testing definitely is not representative. Very few countries if any have systematically run representative samples (I've no idea why not...it delivers such useful results!).

And the same in Leicester, in U.K.
What has been done is fraudulent. They've hugely increased local testing. Lo & behold, they're claiming "10% of positives last week were in Leicester". No info on what % of tests done were in Leicester. They've locked the town down. That's daft.

I've no skin in this game, but sometimes polls are conducted on samples of people of known allegiance to some cause, knowing that other opinions track closely with that main one. Then a gullible person thinks the poll is representative of the wider electorate when it's not.

The law requires anyone using public transport to wear a face covering - soon subject to a £100 fine. But transport staff can't refuse entry or travel to anyone without a face mask. Only the police can do that. This is ridiculous. It's putting lives at risk. No mask, no travel.

A highly infectious organism is reaching its natural equilibrium with its human host. It's plausible that the rate at which this occurs might be slightly altered by actions from political leadership. It's certain not a given. Beyond that, this process is largely beyond influence.

Oh dear Ed. As I'm sure you know the exemptions rules allow him to be out and about.

1 8

David Mcmillan @afinebalance43 · 3h

Which exempt rules? Genuine question

2

Yardley Yeadon @MichaelYeadon3 · 2h

He's registered as a reporter.

2 1 1

David Mcmillan @afinebalance43 · 2h

I just had a look on the govt website and no mention of reporters in the list of exemptions for arrivals from the US

1

Yardley Yeadon @MichaelYeadon3 · 53m

Sorry, I thought the question was about exemptions from lockdown. I'm not interested in this nitpicking, unless the targets of it are "anyone is breach".

1 1

David Mcmillan @afinebalance43 · 38m

No the original question was about coming back from US. Wasn't nitpicking. Was genuinely interested. Am interested that reporters aren't on their. Thought they might have been but I guess many are freelance, so exemption cd be abused

Denise Venn @SimplyVeggie · 54m

Maybe, but it wasn't compulsory. People were able to travel on public transport and go to a hospital outpatient appt without a mask. If it was OK then why isn't it OK now?
It makes no sense.

1

Flipthecoin @Flipthecoin3 · 25m

The rationale was that it was much easier to social distance at least 2 metres earlier on (on some trains you'd have a carriage to yourself) but with more people out, about and travelling it's a lot harder to do 2m or even 1m+ at times.

1

Yardley Yeadon

@MichaelYeadon3

and that's why the wealth gap will increase

5 3

Chris @CSaltroad1 · 4h
A reform of PAYE should be the starting point. It isnt fit for purpose. Scrapping all forms of NI and harmonising taxes on income. Stop penalising employment

1 7

Jess Martini @Greaseproofpap1 · 3h
Good idea but it wouldn't raise tax.
It's not fair key workers on low wages subsidising company grants and loans via tax. The loans are a bankers bailout via the backdoor. One off capital levy is the fairest solution.

1

Chris @CSaltroad1 · 3h
If all income is treated equally though. Capital gains, interest, dividends. It becomes much less easy to avoid. Also include inheritance in that. Single allowance and tax rate(s)

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @CSaltroad1 @Greaseproofpap1 @Holbornlolz

When I make capital gains, I've risked my capital. When I get a wage slip from a PAYE job, I've passed one test, persuaded the firm to hire me. After that, not my job to make sure the firm has orders or to be concerned for profitability. Of course the latter is taxed more highly.

becomes much less easy to avoid. Also include inheritance in that. Single allowance and tax rate(s)

2

Yardley Yeadon @MichaelYeadon3 · 4h

When I make capital gains, I've risked my capital. When I get a wage slip from a PAYE job, I've passed one test, persuaded the firm to hire me. After that, not my job to make sure the firm has orders or to be concerned for profitability. Of course the latter is taxed more highly.

1 1

Chris @CSaltroad1 · 3h

But the point is that PAYE is taxed significantly higher. Because it is an easy target. I'm actually proposing a lower single universal rate. Scrapping NI. It is absurdly outdated.

I don't mind the rate, particularly, but it's reasonable to tax capital gains at lower rates thst PAYE income otherwise the additional risks run by the investor aren't rewarded if successful, and punished by capital losses if not.

2

Jess Martini @Greaseproofpap1 · 8h

PAYE staff have more risk because they have just once source of income, the business owner can find new customers or win contracts. No real investor would concentrate all capital into one investment. If you wanted safety, you would stick it in a savings account.

1 1

Yardley Yeadon
@MichaelYeadon3

Replying to @Greaseproofpap1 @CSaltroad1 @Holbornlolz

I agree a PAYE staff member can lose their job & income. That can not justify all such earnings being treated as somehow special for tax purposes. CGT is lower than PAYE for the reasons I gave.

This ratio of #COVID cases to deaths really doesn't look right. In early June the US was logging ~20,000 new cases/day. 1% CFR? Really?

Where are the US excess death stats?

> The **US Centers for Disease Control and Prevention** (CDC) on Sunday reported 2,841,906 cases of new coronavirus in the United States, an increase of 52,228 cases from its previous count, and said the number of deaths had risen by 271 to 129,576.

2 1

Yardley Yeadon
@MichaelYeadon3 Follow

Replying to @bibbleco

There is zero chance that the cases data is correct. Very many show no symptoms & won't get tested unless in a representative sample, of which there has been little.

4:47 PM - 5 Jul 2020

1

Paul JaYmes @paul_jaymes · 7m
Replying to @MichaelYeadon3 @bibbleco
The CFR is based on tested symptomatic cases, not total infections (see IFR) & in most countries it's been a few % - certainly higher than 1%.
I strongly suspect deaths are being undercounted in the US as they have been elsewhere. The uninsured are I suspect unrecorded too.

2

Chris @CSaltroad1 · 8h
A PAYE employee on av salary is paying an effective rate of 27%. Probably that is their lot with no other income

Capital investment may be only a part of their capital, they may not even have earned it themselves and so feel the risk is worthwhile

Things not black and white

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @CSaltroad1 @Greaseproofpap1 @Holbornlolz

True enough. But the wider point is valid & it's nothing to do with whose capital it is. It's that unless the upsides compensate for the occasional total loss downside, you soon find there isn't capital available to start or grow businesses.

I understand the definition of CFR, but where, as is true here, the biggest uncertainty is the number of cases, it's not useful & is not anything approaching a 'constant' feature of the virus / human interaction.
Infection fatality ratio is much closer to that constant.

34 38 198

Mrs Kinners @kinners_rachel · Jul 4
If you wear anti pronation insoles do you still go for a supportive shoe or do you go for neutral in order not to over-do the anti pronation control?

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @kinners_rachel @ASICSeurope

If you've had well designed inserts I'd have thought, by definition, a neutral shoe would be where to start. Though there's more to foot positioning & dynamics through the entire cycle than pronation. Many more degrees of freedom are possible - just quietly observe a few runners.

...transmission. There's also a technical barrier with the latter that the experts in this letter appear to have ignored: respirable particles are very small (5microns is 1/200th of a mm). Volume & mass carried in a spherical particle varies with the cubic power of its radius.

Not really. They are applying the definition for influenza to covid.

3 3

Yardley Yeadon @MichaelYeadon3 · Jul 3

What do you think should be incorporated in recognition this isn't flu (though it is primarily a respiratory virus) and do you think that would adjust the definition to higher or lower % of deaths (and why)?

1

Jeffrey Hulten @jhulten · Jul 3

I am not an epidemiologist, but I understand this is a novel virus. We know ways to save more people than we did six months ago, but they are super resource intensive.

2 1

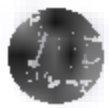
Jeffrey Hulten @jhulten · Jul 3

We are seeing a higher positive test rate. That will most likely result in more hospitalizations, but might not result in more deaths if the patients are younger. "Not dead" is good, but four weeks of hospitalization is not.

3 1

Kyle Lamb @kylamb8 · Jul 3

This is blatantly false. Flu can absolutely have long term effects



3 1 30

But I have to wonder what might have happened. If they did bust out his windows?

1

Yardley Yeadon @MichaelYeadon3 · 24h
It doesn't bear thinking about, does it?
I hope he's ok. I think if he'd been killed, surely we'd have been told?

2

ZeroCool @altzerocool · 24h
I think it maters because if there intent is to bust out your windows and drag u from your vehicle like they did in the la riots long ago. I want to be prepared and I wont stop if that's what they want to do.

I would also not stop. I've always had a good 'personal risk radar' after being attacked by a literal psycho in a Portsmouth pub as a young man. If in doubt, I put space between me & the threat. If I lived in the US then, with regret, I've no doubt I'd be armed (legally, I hope).

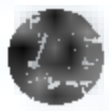
The land was under British control. It was never Palestine's; according to history. It was given to Israel.

1

Ras-Putin @RasPuti84556755 · 4h
You need to brush up on history. The land was even known as Palestine in the bible and was never part of 'Britain'.

1



Eddie Chacon @11Bravo1Papa · 2h
It was under British control regardless of what you want to believe. Since you brought up the Bible, are you referring to when God gave the land to the Canaanites (Hebrews). Doesnt matter which way you want to go, you are wrong.

1 1

Ras-Putin @RasPuti84556755 · 2h
Like I said "you need to brush up on history". The British may well have given away something that didn't belong to them, that's what the Brits do. Also, the Biblical Hebrews were not Eastern European Khazarian mafia.

Holocaust, really? Top definition "destruction or slaughter on a mass scale, especially caused by fire or nuclear war". Yes, there have been deaths. Population of Palestinian Territories 2020: 5.1mill. In 2000: 3.2mill. Massed slaughter it isn't.

Interesting these alleged relatives never seem to have social media themselves. It's always a family member that coincidentally has a claimed authoritative source that just happens to agree, pushing forward the narrative. If not on the record at this point, it didn't happen.

He was waffling constant bullshit as per. Only total fucking idiots believe the constant lies he comes out with.

The reason we have no many deaths is down to his utterly incompetent leadership. End of story.

1

Yardley Yeadon @MichaelYeadon3 · 21h
You're probably among the idiots who think locking down too late was a major factor? Did you know that SAGE never even discussed let alone recommended locking down?

1

DET @DTofNinianPark · 12h
Of course it was a major factor. It's not even an argument anymore. Perhaps if the clueless lazy cowardly oaf had bothered to attend a COBRA meeeting about COVID we might have been better equipped to deal with it.

You're flat wrong. SAGE never discussed or recommended lockdown. The minutes of the meetings are public. What I've saud, twice now as you seem unable to read, is demonstrably true.
From an evidential standpoint, the infections had peaked & were declining BEFORE lockdown (UK).

New York is now one of the least risky places on the planet, after London.
It can easily be shown that their population collectively has herd immunity of but a short time from it.
It's counterproductive to prevent the last few % to gain immunity themselves.

This is why hate speech laws are unenforceable. There's no clear, objective, standard. You can't legally speak unless you know exactly what your listener hates. You have to read their minds.

Apparently they've come to hate even the idea of open discussion.

If peak infection passed just before lockdown, why are we still seeing triple digit deaths when we locked down in double digits? You know, logically speaking...

2 2

Yardley Yeadon @MichaelYeadon3 · 33m
You could try this. The interval between infection & death varies, but the median is around 24days. Peak deaths have variously been called Apr 8 or 10. Go back 24d from Apr 10 & you get Mar 17, a full week before lockdown. Peak infection on or around Mar 17. Something, not...

Please read this short string for the experimental evidence that aerosol transmission has been looked for and has not once been shown to occur. If it is possible, it is clearly an extremely minor route.

In order that modern day slavery is playing any role whatsoever in the pandemic, it's necessary to show that this form of working is new. If it has been going on for months or years, any pro-transmission effects would already be in the case stats.
So, is this new? I smell BS.

My son's step daughter works in a Covid free home, she came home upset du to one of her ladies died from a Stroke, Doctor's refuse to attend they have to take pictures of the deceased he then recorded death certificate as Covid. Home complained but refused to change????

8 25 57

Yardley Yeadon @MichaelYeadon3 · 2h
I believe you. The reason they won't change it is that it's fully in line with the utterly bizarre guidance from Govt. Docs more or less are required to put covid down even if no test for virus has been done, if the death plausibly might have a viral contribution.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @MichaelYeadon3 @jmabelect and 2 others

Stroke might be precipitated by infection, that's grounds enough. The corollary is the # of covid19 deaths recorded will be an exaggeration, by an unknown degree. This method of death certification is without precedent in U.K., and is not justified, esp as virus fades away.

Wrong, as a registrar I make the informant aware of the cause of death, if they are not happy, the certificate is rejected. No one is registered with something they haven't had. Many in care homes have underlying conditions, dementia, cancer, cardiovascular, diabetes etc

1

Replying to @LoUseful @jburnmurdoch

I agree it's droplets. Does that help? I'm simply examining the aerosol claims, which so far fly in the face of the negative evidence. If that changes I will change my view immediately.

Replying to @brass_neck2 @Sozzinski @BorisJohnson

If we're forced to wear them, at a time so late in the pandemic that more people will be harmed by them than saved by them, Govt will never release the said requirement to wear a mask.
It would be as valid to require them against 'flu in Dec than vs CoV now & soon would be.

This is a fantastic resource. Thank you for sharing.
Now, it is claimed that airborne transmission is not & shouldn't be prevented by masks, given the characteristics of the presumed infective particle & of masks.
May I ask you one, essential question?

Whats the empirical evidence that the aerosol route is important?
In the studies I've read, it hasn't been possible unequivocally to assign the inhaled route of infection, as opposed to hand to infected surface, then to face.
After decades in therapeutic aerosols, I'm interested!

(((Dan Hodges))) @DPJHodges · 4h
What is the point in the government saying on one day "here's £10 to go to a restaurant" if a couple of days later it says "oh, but if you do go, you have to wear a mask, otherwise you might catch a killer virus and die".

240 219 874

The Ripe Mangoes @theripemangoes · 4h
You take your mask off when sitting with friends and away from others, to drink or eat. You put it back on when walking through the pub to the toilet or the bar in order to protect staff and other customers.

This is entirely normal. My wife & I did the same with our Ltd co, a pharmaceutical R&D consultancy firm (based on a long career as senior researcher in pharma companies). Each person has a modest tax free dividend allowance per year. If declaring a larger dividend, tax is due.

5 3

Mo Fairclough @MoFairclough · 1h
Not paying ur full tax whilst receiving an 800k wage from a public funded corporation is immoral. With that sort of wage he can well afford it, it's taking money away from the NHS, etc especially when u pretend to b a socialist, incredibly hypocritical

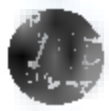
There is anger in society. But is there political opposition, an opposition that expresses that anger? I don't see one. It seems we live in an elective dictatorship and one where the "elective" element is very ineffective, given FPTP and media bias, and opposition is emasculated.

1 4 47



Simon Cosgrove #FBPE #Remain @simoncosgrove · 1h
You would think the problems are so obvious and the anger is so deeply felt (at least among those who oppose the government, which is what oppositions are supposed to do) that the main opposition party would at the very least have a clear plan. And would state it.

1 2 26

Excess deaths would tell you that it clearly wasn't their time. 60k+ excess deaths this year. But I am sure you are correct 60k more people had terminal illnesses this year than the average over the last 5 years

2

Yardley Yeadon @MichaelYeadon3 · 10m
It may surprise you to hear that in France, who are a few weeks ahead of us in pandemic terms, they're experiencing substantially LOWER weekly deaths rates now. This does rather suggest that many of those who died were 'due' to die shortly. Not all by any means, but some.

2nd reference: “We found that droplet blocking efficiency anti-correlates with breathability; less breathable fabrics being more effective in blocking”.
When people make their own masks, do they choose more or less breathable fabrics? It’ll be “more”. Which don’t work.

Here's the findings of the ONLY large scale randomised clin trial of cloth masks. They don't prevent transmission of respiratory infections. ncbi.nlm.nih.gov/pmc/articles/P … "rate of resp illness stat sig higher in the cloth mask arm (relative risk=13) compared with the medical mask arm".

You really don't get it, do you?

1

Sozzinski @Sozzinski · 11h
Do you understand the damage this is doing to the economy, and how many people will die as a result of that? These deaths will be no less real than any Covid deaths and can be laid at the floor of people who are supporting this zeitgeist of fear.

2 4

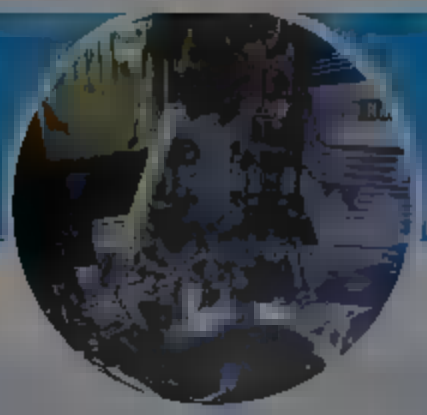
Sozzinski @Sozzinski · 10h
The risk is real but the responses must take into account the impact they will have on economy and how that will affect health and well-being. So, yes, I think I do understand thanks.

1

Carys Hughes @CarysHughes2 · 10h
The bottom line. This virus is so deadly that it needs to be contained. This is what so many people have failed to pick up on.

3

Yardley Yeadon
@MichaelYeadon3
Follow



Replying to @CarysHughes2 @Sozzinski

In terms of lethality it probably is slightly worse than a bad influenza season. Different viruses, of course, but both lung-trophic. Both kill mostly the elderly & infirm. Median age at death is 84y (F) & 81y (M).
Bonus, Covid19 does not kill children, which 'flu defo does.

The Web tells me that Ebola is 80-970 nanometres and Coronavirus 50–200nm.

So as Coronavirus is smaller presumably you need a finer weave fabric to keep you safe?

If so, why did people wear this in West Africa instead of £5 masks from Amazon?

They don't work. The main way to avoid infection is distancing & crucially, do not touch your face or eyes while you're out, and wash thoroughly on return inside. Most transmission is probably hand to contaminated surface, then to mouth, nose, eyes.

What is your peer reviewed science? Not our politicians recommrnd masks but our virologists.
As C19 is spread mainly by aerosols you breath it in. So why does a nose/mouth cover not reduce this? Hhm, thought UK was a wealthy country? Seems continental Europe is wealthier.

The pandemic is in the last stages. Note the monotonic decay of smoothed daily deaths. Nothing has deflected it from its downward path. There have been no clusters following street protests or busy beach weekends. Still risky if vulnerable but getting less so each week.

This is a fantastic resource. Thank you for sharing.
Now, it is claimed that airborne transmission is not & shouldn't be prevented by masks, given the characteristics of the presumed infective particle & of masks.
May I ask you one, essential question?

1 1

Yardley Yeadon @MichaelYeadon3 · 19h
Whats the empirical evidence that the aerosol route is important?
In the studies I've read, it hasn't been possible unequivocally to assign the inhaled route of infection, as opposed to hand to infected surface, then to face.
After decades in therapeutic aerosols, I'm interested!

1 1

Bleu cheese on wings @knowitallmom · 16h
I have theorized that if there is aerosolized spread, it is from recirculated or forced air systems. Apartment buildings, nursing homes, confined spaces with shared recirculated etc. Look at urban areas w/those bldgs - higher infection rates. Just a theory, but...

Simon Jordan @SimonJo37129961 · Jul 6

Latest NHS figures for #Covid19UK very revealing now that countries seem to finally be coming clean about how deaths were attributed.
Essentially only 1,334 people have died "from" Covid in the UK. Only 294 were people under 60 years.
england.nhs.uk/statistics/sta...

149 1.1K 1.5K

Peter Cambridge #StandUp4Brexit #AllLivesMatter @cambridg... · Jul 6

People died prematurely. Those who died (and their families) don't care if it was with or from Covid, they all died prematurely as a result.

In a few years time stats will show that the usual numbers of people died in the previous few years, that doesn't mean it's OK.

16 1 10

s @s02551242 · Jul 7

If the last 2 weeks of lower deaths than 5 yr average continues it would indicate 'prematurely' was weeks rather than months/years. My 80yr old mother said family contact for a few weeks was preferable to months in isolation if she had a choice. She didn't want a lonely end.

People died prematurely. Those who died (and their families) don't care if it was with or from Covid, they all died prematurely as a result.

In a few years time stats will show that the usual numbers of people died in the previous few years, that doesn't mean it's OK.

16 1 10

CovidSenseBloke @CovidSenseBloke · Jul 6
All death is sad. Not all death is tragic. As a society, we have never affected 100% of a society to protect 0.04%-0.06% of it (death rate UK). Why did we do that this time? Was it a price worth paying?

What's worse is that the sacrifices of the near 100% didn't save any lives. It's all predicated on the notion that "lockdown saves lives". Actually at most it only intended to flatten the peak, and there's no evidence it did even that. All that sacrifice & no benefit to anyone.

Woody Woodstock @woody_gsd · Jul 7

20/20 hindsight is a wonderful thing . At the time (and now), no one knew what it could end up as...they did kniw it killed...China physically barricaded it's population inside, there was no cure.
They were hung if they did...and hung if they didn't ...tough call.

1 1

CovidSenseBloke @CovidSenseBloke · Jul 7

Well we can't change what's happened anyway. But we can learn and not make the same mistakes. Except we seem to be doing exactly that in numerous areas of strategy & policy.

1

Woody Woodstock @woody_gsd · Jul 7

So when the current bubonic plague makes it here from China....we carry on as usual? Or do we have a cure fir that?
Really hope it doesn't get over here...but suspect it will

It's not ok not to live forever, but seasonal flu also takes the vulnerable. This one hasn't reached 650k yet, much as we grieve for each and every soul.

> **Up to 650 000 people die of respiratory diseases linked to seasonal flu each year**
>
> 14 December 2017 | News release | GENEVA

1

Peter Cambridge #StandUp4Brexit #AllLivesMatter @cambrid... · Jul 10
The argument against lockdown seems to be that because Covid hasn't killed off as many people as flu then it's not as deadly as flu. How deadly, in comparison to flu, do you think it is? The same, less deadly, more deadly?

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @cambridge_peter @zigazagazee and 2 others

The principle argument against lockdown is that it's ineffective at preventing transmission, which quickly became primarily nosocomial.

As someone familiar with number & graphical representation, I don't like the five year average. That gives no information on the variation year to year, which is profound. At very least, they should add 'the last exceptional year', in this case, flu deaths 2017-18 (not sure year)

It's clear that significant no's of ppl over a certain age & with significant other comorbidities, r at huge risk of dying from a combination of those whilst catching #COVID19. My beef is with 'locking up' under 40, healthy + kids. However lockdown has been & gone mostly now.

2 7

alfonzo @alfonzoPgr · Jul 8
Yet there are thousands of people under 40 in the US who have died, a lot of them without comorbidities

6 5 34

Peter Cambridge #StandUp4Brexit #AllLivesMatter @cambridg... · Jul 6
You've quoted a death rate for the UK, how do you come to 0.04% - 0.06%?

2

James Baker #KBF #EndtheLockdown @Jamse83089 · Jul 6
1334 divided by 66 million. Even 49000 deaths (ONS figure for COVID) divided by 66 million

1

Peter Cambridge #StandUp4Brexit #AllLivesMatter @cambridg... · Jul 6
That argument only holds water if everyone has had the virus and they haven't.

1

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @cambridge_peter @Jamse83089 and 3 others

It's my contention that almost every susceptible person has had the virus. At an infection fatality ratio of 0.25% (USA CDC) then 45k deaths implies at least 18 million infections. About 1/3rd of the pop were immune beforehand. Others weren't susceptible. Overall=herd immunity.

Simon Jordan @SimonJo37129961 · Jul 6

Latest NHS figures for #Covid19UK very revealing now that countries seem to finally be coming clean about how deaths were attributed.
Essentially only 1,334 people have died "from" Covid in the UK. Only 294 were people under 60 years.

conclusions from a model. Hospitalisations and deaths are the only plausible metrics but...

3 2 17

Willow Wise #KBF Privilege is a class issue @WillowWyse · 11h
both are subject to the same issue as "cases" namely the hopelessly inaccurate PCR test. 1. Tests are contaminated and cause infections to rise as testing increases. 2. Many false positives. 3. Test cannot distinguish between Covid and other coronavirus - Covid not isolated

1 5

Willow Wise #KBF Privilege is a class issue @WillowWyse · 11h
4. Tests cannot distinguish between live virus (infection) and DNA shreds from virus dismantled by immune system (immunity).

1 3

Gillam @GillamAF · 4h
All of those things may be correct but they are present all the time and so cannot explain the rise in the trend line. We ignore that at our peril.

2

Simonmwuk @simonmwuk · 1h
I'd you look at the 7 day average of new cases, it's higher yesterday than it has been in a week. It's right to stress caution. We came out of lockdown too quickly, putting the economy above health.

What's the doubling time at R=1,3? I think it's measured in weeks? If so there's time to get a grip if only some-one had the nous!

1 11

Prof Nick Cowern @NickCowern · 7h

For statistical reasons the R value is estimated from data that have been averaged over the 2 week period up to each date (thus a running mean, centred on one week prior to the current date). If you look at the raw data you see the main uptick is in just the last week...

3 12 16

Prof Nick Cowern @NickCowern · 7h

That recent rise is faster than the averaged R value would suggest. We'll see over the next couple of days if it grows exponentially or not. The risk is there though. The rapid-fire actions the govt has taken, not waiting to see the consequences, has been foolhardy in my view.

14 18

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @NickCowern @Clarkelanm

We'll see how it goes. It's my contention that the monotonic fall in daily deaths since Apr 11 is due to falls in % susceptible people & is running down as fewer & fewer susceptible remain. If correct, this population cannot support outbreak of any great size.

driving whole way do you?

1 5

Spangle @Spangle27613053 · Jul 11
🤮🤮 No. I've done that trip and that's all you can smell. It's nauseating.

2

Yardley Yeadon @MichaelYeadon3 · 8h
Isn't that only on ferries?

Graham Pearce @GrahamITGuy · 3h
A little tale, with a tragic end.....

On ferries they used to leave the bow and stern doors open to clear fumes from the vehicle deck before departing. You know where this is going?

The Herald of Free Enterprise's were not closed before departing and it capsized, 193 died.

I do recall it well. I was in my penultimate doctoral year at Surrey & had enjoyed motorcycling around Europe that & prior summers. Always used the RORO ferries (ex-Pompey). I remember feeling so awful when I learned what had happened. Could have been any boat of the type.

Her modus operandi is to dangle a carrot. Tell you that if you work hard capitalism can elevated you to her status. In reality she'll always despise you.

1

Yardley Yeadon @MichaelYeadon3 · 10h
Wait, are you saying that even if you work hard, there's no chance you'll do well? Obviously, not everyone will. But in your mind, is it not worth the effort because JHB et al have rigged the game?

1

The Tall Beardy One #Rejoin @Snegreid · 4h
That's not what I said at all. Work hard, do well by all means.
My point was that the current version of capitalism only works for those at the top.
We are told that capitalism creates wealth for everyone and if you are poor you'll be better off voting Tory.
That's a lie.

Reduce To Truth @Matrobdo · 1h

What *is* 'black'?

If it's genetic, then plenty of people who consider themselves to be black are 50% white or more.

If it's skin colour, then plenty of people who consider themselves to be 'black' look Mediterranean or whiter.

So, what is 'black'?

2 3

Yardley Yeadon

@MichaelYeadon3

Replying to @Matrobdo @LozzaFox

Self identification can be enough. There was famously a white woman, I think in the USA, who claimed blackness for years until it came out that she was no more black than I am.

different situation and is definitely needed.

1

Billy @billy_na_mates · 5h

Total agree that the UK and the US are totally different, the UK policing, the equality act, racism laws, etc.

The problem is if all these different organisations use the same BLM slogan, they are all classed as the same.

anyhow, I going now.

Stay safe

1 1

Human Rights @HumanRi56 · 5h

No they're not classed as the same. They are factually different. It's easy to differentiate the two, the only ppl that cant differentiate are the ones who refuse to see racism.
The UK and US policing is different. But UK still has a huge racism and systemic racsim problem.

At the point we are & with the diversity of approach to assigning covid19 at cause of death, or not, small differences have to be treated with great caution. I like the large ONS sample of 20,000 people each week for virus (I think) & that's ever downwards. 1/4000 last time.

We'll see how it goes. It's my contention that the monotonic fall in daily deaths since Apr 11 is due to falls in % susceptible people & is running down as fewer & fewer susceptible remain. If correct, this population cannot support outbreak of any great size.

I've been wondering if there will be a second wave given there were not second ways of SARS 1 and Mers. From my lay perspective the prediction of a 2nd wave was from Spanish flu which is genetically different from coronavirus.

2 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @L0rdhelmut @InProportion2 @Mk139355801

Correct. The CRITICAL requirement for a "2nd wave" is a different virus. Flu mutates quickly & the sequence in the 2nd wave 1918-19 was different from the 1st. Coronavirus-19 has mutated too, but to date none have been notably more virulent. 2nd wave unlikely.

...greater the denominator, the lower the ratio. That IFR is unlikely to be very different in the two settings. So a comparable death rate implies similar % of population exposed to the virus. I'm correct, am I not?

4:27 PM - 13 Jul 2020

1

F @F03148046 · 20m

Replying to @MichaelYeadon3 @NickCowern @Clarkelanm

As of 9 May, 0.58% of the population of Bergamo had died of Covid-19. 57% of people tested positive for antibodies in June. That's a 1% IFR - the true figure will be higher because of the time gap. Allow Bergamo to happen across the UK and you get 400k deaths.

1

F @F03148046 · 13m

Italy locked down (harder than us) before the virus was established nationwide. The south was almost untouched. Bergamo was devastated. There's nothing special about Bergamo except how long the virus had to spread there before lockdown. That's just what happens if you let it rip.

example given was a released patient had 7 positive tests so it was registered as 7 +cov cases even though actually only 1 person. The comment section blew up with nurses around the country siting the same exact story in their hospitals. The consensus was not that the +cases don't exist but that the numbers are exaggerated. Also that they were surprised by so many tests being positive so one nurse sent in 2 unused swabs and results came back positive. So several nurses sent total of 10 unused swabs and yep... they all came back as positives!

Yah but the southern states just wildly reopened and they're paying for it big time now. Even if you don't care about the death, the hospitals are overflowing and the economy is screwed down there. In NY we opened in four phases according to infection levels and it's working

1

Thinkforyourself @Mk139355801 · 1h
I think the virus will take its path and die out. Very common for a certain population immunity to kill coronaviruses so not all need catch/be immune. The peaks are the sum of the peak without lockdown with added deaths from families stuck home infecting each other like NY.

1 1

nerf darfindle @L0rdhelmut · 50m
Well I think New York like Europe got on top of it fast and may have ended it in the way you describe, that were seeing now in New York data, and that we are in Europe. It's the southern states that caught it just kept letting it grow worse.

1

Yardley Yeadon
@MichaelYeadon3

Replying to @L0rdhelmut @Mk139355801 @InProportion2

In truth, they have little choice but to shield the most vulnerable & let it rip. Death rates would then be unremarkable & it'd be over in a couple of months. Hiding away means it'll take years to burn through most susceptible individuals. It cannot be eliminated.

These are the sorts of infection fatality ratios for covid19 wherever it's been estimated. Between 400 & 1000 people infected per death. So in U.K., 45k deaths implies 20-45mlion infections. 30% start immune anyway. Hence herd immunity & end of pandemic.

K Singh @KSingh_1469
Replying to @Michael_H85 @JohnFGresham and 2 others

That is on the very high side, doesn't look like Australia has done a very good job in community testing.

All around the world the IFR for COVID when equalled out is 0.1-0.25% consiste...

Do you drive? We could all stop using cars and save lives. But it would be really inconvenient.

3 9

Owen Warne @OwenWarne · 2h

I do drive but that's not relevant to this topic is it?

3

Gavin Thorpe @GavinThorpe5 · 1h

Well don't you think it's selfish to drive when you could choose not to and potentially save people's lives?

1

Owen Warne @OwenWarne · 1h

No. Because as it's been pointed out, life is full of risks, but there are things in place to mitigate and minimise those risks and I do everything I can to do that. Any other questions about my driving habits?

2

You could drive at half speed, which would DEFINITELY reduce deaths & serious injuries. Masks won't prevent one infection. Masks have been tested in a randomised controlled trial & they do not reduce respiratory viruses, at all.

During flu season, the only people who get tested for the flu are those who are sick enough to seek help from a doctor.

If we used the same strategy for covid, would we still have a pandemic?

112 307 1.0K

Chris West @ChrisWestBass · Jun 30
It would be much worse. Covid is being transmitted by asymptomatic patients whereas flu generally isn't. It's important to stop infectious people transmitting to vulnerable people.

3 2

Ripoff @IAmRipoff · Jun 30
uh, no... they've explicitly said that asymptomatic folk are NOT responsible for nor are they truly contributing to the spread of the virus

1

Chris West @ChrisWestBass · Jul 1
The WHO backtracked from that within a couple of days.

2

Yardley Yeadon

Replying to @ChrisWestBass @IAmRipoff @Purpose_Warrior

Actually, they tried to walk it back, because the person in charge of that unit was categoric about it. They made her come back. She didn't recant, but laughably she said that the models said they were transmitters. "It works in practise. But does it work in theory?" Lol

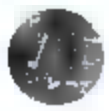
We'll see how it goes. It's my contention that the monotonic fall in daily deaths since Apr 11 is due to falls in % susceptible people & is running down as fewer & fewer susceptible remain. If correct, this population cannot support outbreak of any great size.

2 3



jonny Davies @jonnyDa90681310 · 13h
148 uk deaths yesterday - 52 across all the other 27 EU countries put together . Yet main stream media has focus on other stuff it is being fed .

2 3 6

Richard Norfolk @Richard_Norfolk · 5h
Yep - Starting to choke on the smokescreen. Johnson had promised he would reinstate the daily briefings, if there was anything significant to report. Clearly 148 deaths, the equivalent of an airliner disaster, every day, is insignificant.

Roughly 1800 people die every day in U.K. & in winter, quite a proportion are from flu. Respiratory viruses are quite a common final insult leading to death of elderly & already ill people.
While I appreciate Monday data is always low, it was 11 covid19 deaths today, not 148?

Hard to believe 138k US deaths in 5 months with a projection of 200k Nov is nothing to be alarmed about. The flu kills, but not at the same pace as COVID-19. The R0 is much higher. Masks are a tiny price to pay, but I understand a significant amount will still think it's OTT.

It won't save anyone, because the virus is NOT airborne. It's been looked for & not once has infectious matter been found, only broken RNA strands. This is WHO's position as recently as two weeks ago. There are no exceptions in the scientific literature. None.

1 8

Ravi Subramanian @RaviSubbie · 8h

What is the general scientific consensus on how Covid is transmitted?

Any links to papers?

Genuinely curious.

I don't think we can do the experiment to show hand contact to an infected surface, then same hand to face.

I have shopped in supermarkets each week throughout the pandemic & have never worn a face mask. Neither I would add has any of the check out operators. Why now, when Covid cases are at their lowest is the Govt to make wearing face masks mandatory in shops? Absolute madness.

Less that one in four thousand people now have the virus. Some will be ill & hopefully self isolating. Most of the rest will be asymptomatic & unlikely to be infectious (unless you lick them extensively).
It's politics & psychology, not science.
I've lost all trust in authority.

You're correct. Just 1 randomised controlled trial of medical masks vs face cloths vs (mostly) nothing showed no difference between the groups over several months. Slightly higher incidence of influenza like symptoms in the face cloth group & more lab confirmed viral infections.

I do understand this point. I spend my day in masks, and I'm not thrilled to wear one in my down time either. However, if it prevents someone sneezing or coughing over the more vulnerable, or my 80 year old Mum who's struggling with breast cancer. Small sacrifice..

Loads of generous "ifs". Problem is, they're proven not to stop transmission of any respiratory virus, mostly because aerosol / true airborne isn't a route that's been proven to occur at all. Certainly ruled out experimentally in the case of covid19. I've read the key papers.

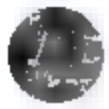
If it would prevent transmission it would be an easy sell. Mask wearing doesn't block transmission.



1

Jorge Colon @JorgeConsulting · 48m

Several studies say otherwise: ncbi.nlm.nih.gov/pmc/articles/P.... Now if you're trying to say that improper use of masks, that masks don't block 100% of particles, or that some masks are ineffective over others you are absolutely correct. Data shows masks reduce particle transmission.

2 1

Yardley Yeadon

@MichaelYeadon3

Well, I cited the only RCT of masks in preventing transmission of respiratory viruses in several hospitals & thousands of HCW. There was no reduction. Viruses are unbelievably tiny, visible only by electron microscopy. Bacteria are 30x larger. You need to meet / raise a neg RCT.

Replying to @Mk139355801 @L0rdhelmut @InProportion2

Just chipping in: best metric is termed infection fatality rate, the fraction of those infected who go on to die. It's an estimate where a high % have no symptoms. It's approximated by % of a City with antibodies to virus & nos of dead in same city & overestimates lethality.

I've got N95 flap valve masks. Close inspection yesterday told me that - obviously - it can't protect anyone from anything. Unfiltered vent. Are these legal in shops? They shouldn't be, but who's checking?

1

Duncan OBrien @DuncanOBrien13 · 54m

A simple N95 mask with an exhaust valve allows unfiltered air out through the exhaust. It does a reasonable job of filtering the incoming air.
A surgical mask could be seen has having inlet and exhaust ports, unvalved purely due to poor face seal.

1 1

Duncan OBrien @DuncanOBrien13 · 47m

Step up to a half mask respirator, a 3M 4125 for example. You have excellent face seal, valved unfiltered exhaust, valved inlet (prevents breath out soaking the filters).
So basically.
3M 4125 = Excellent filtration in - No filtration out.
It protects the wearer.

1 1

Yardley Yeadon
@MichaelYeadon3

Replying to @DuncanOBrien13 @DrPennyHall and 3 others

As I've understood it, 100% of the technical rationale for mandatory mask wearing is to protect others from the infected droplets the wearer might be emitting. If that is correct, then this mask falls at the first & surely must not be compliant with the law?

Where did you get 4 million?

1

nerf darfindle @L0rdhelmut · 16h
Slightly higher than one percent of the population in the United States.

1

Thinkforyourself @Mk139355801 · 16h
Why 1% ?

1

nerf darfindle @L0rdhelmut · 9h
That's the natural fatality rate of covid according to trump, so it's the most fair measure of what happens without any intervention to people who want to live with the virus.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @L0rdhelmut @Mk139355801 @InProportion2

No, according to CDC, it's 0.26% of those infected, which is probably substantially less than 50%. I'm estimating 0.1% of entire population, which is around 320k. For context, 2.8million die yearly in USA. So covid19 might cost 6wk worth of the normal death rate.

The public has been conditioned to expect a second wave, based on the incorrect notion that its commonplace, almost de riguer. In fact it only happens if the virus mutates far enough away from its sequence during the initial outbreak that the immune system sees it as new.

All sorts @Ali79596850 · 25m

A survival rate of 99.96% and thats with the falsified numbers..

95% of those deaths had pre existing conditons..

Under 65 year olds are more likely to die in a car accident than of Covid19

Coronahoax

Ben, it's a null question. The virus is definitely not airborne. That's according to published scientific literature & is the WHO position. Also, there's been 1 randomised controlled trial of mask wearing & they did not reduce transmission. Informed people know this is fraud.

Clive Hill - #TVTTagTeam @Clive_Hill · 10h
It is droplet-borne. That is the point of the mask, it prevents the inhalation (or expulsion) of droplets. An airborne virus wouldn't be stopped by the masks used. That is why different PPE exists to control the spread.

I agree that's the main transmission route. We've known this since before covid19: it's how influenza's spread. So why not mandate simple masks in March, that's what I don't get.
Even though we both believe masks 'should' protect people from viruses, evidence is that they don't.

6:50 AM - 15 Jul 2020

1/ Covid isn't a new group of viruses.
The correct use of masks will reduce the spread of a droplet-borne virus. The government didn't mandate the use of PPE by the public based on the information available at the time. We are still discovering pathology around Covid-19.

Clive Hill - #TVTTagTeam @Clive_Hill · 25m
Replying to @MichaelYeadon3 @BBradley_Mans @DebbieE46116279
2/ The cynic in me thinks the fact that the government couldn't supply clinical-grade PPE to NHS trusts was an additional factor behind this decision not to mandate wearing them. They were telling us not to use PPE.

I've been wondering if there will be a second wave given there were not second ways of SARS 1 and Mers. From my lay perspective the prediction of a 2nd wave was from Spanish flu which is genetically different from coronavirus.

2 2

Yardley Yeadon @MichaelYeadon3 · Jul 13
Correct. The CRITICAL requirement for a "2nd wave" is a different virus. Flu mutates quickly & the sequence in the 2nd wave 1918-19 was different from the 1st.
Coronavirus-19 has mutated too, but to date none have been notably more virulent. 2nd wave unlikely.

1 1

nerf darfindle @L0rdhelmut · Jul 13
Man oh man oh god do I hope you/me are right. Everyday I google "2nd wave Europe" and "2nd wave Asia" to check on how things are shaping up. I just want this nightmare to end.

1 1

Yardley Yeadon
@MichaelYeadon3

Replying to @L0rdhelmut @InProportion2 @Mk139355801

This 2nd wave thing has no science behind it. There isn't some immutable law that makes it happen. As you say, famously, the Spanish flu arrived more than once, but we know now from "virological archeology" that it was a different flu virus. We don't know why it was so lethal.

There's that pattern again. Some will twist into contortions to explain how human action did this.
Remove the politics & more people accept its a natural phenomenon: a novel virus coming into equilibrium with its new host.

That covid19 (SARS-CoV-2) isn't a new class is appreciated. My point was we know broadly how the 17 respiratory viruses are spread & that's not recent. As regards covid19 what we have confirmed is that transmission isn't aerosol / airborne. I think you're right about PPE/NHS.

You offer no justification for your smear. You know perfectly well that “scarily right wing” can be seen only as an insult, so you do need to ‘show your working’.
Mr Neil is a tough interviewer who gives no quarter to anyone on any ‘wing’.
You’ll have your examples. Cite them.

Femi - My mask protects you. Please protect me. @.

I think Andrew Neil is biased and scarily Right-wing but he is such a heavy hitter when it comes to Paxman-style interviews, including when holding his own side to account, that I am genuinely disappointed to see him go.

It's silly to imply Govt is using covid19 to reduce the population.
By years end, the population will be larger than on Jan 1. Births + immigrants - emigrants + deaths. It's a positive number. In places hit early, all-causes mortality is below usual.

Ignore the government and
Stop being afraid. twitter.com/francis_hoar/s…

The private sector is already adjusting: many will delay the return to offices planned for September, regardless of official advice. Why move workers back if this will need to be reversed in November or December in the event of a second wave? The longer workers stay at home, the less likely they are ever to come back fully. I don't know a single employer who believes they will revert to previous levels of office working. The interaction of the virus and technology will create a new class divide in Britain: those who can work from home, and those who can't.

The private sector, for its part, is facing gargantuan structural losses: the economics of offices and retail is predicated on mass commuting and tourism. The former won't fully come back; the latter will take a year or two. The arts, luxury, fashion, transport, hospitality, restaurant and many service industries face decimation. It's a full-on bioti crisis: London's economic ecosystem is suffering an immense decline in diversity. Lower-paid jobs, in particular, are being culled; the population could fall, with tens of thousands returning to Europe.

EYI tuberculosis is

1 1 1

Iain Duff @iainduff9329 · 3h
Why are you showing a graphic from March 2020. It's soooo out of date and totally irrelevant

1

Simon Fredrick @SimonFredrick2 · 3h
My question still stands.

3 1 1

Iain Duff @iainduff9329 · 2h
So tuberculosis stands at just over 3000 deaths/day worldwide. How many Covid deaths were there at its peak/day (if it's even reached its peak) worldwide? The govt are just trying to reduce the chances of a 2nd peak as we come out of lockdown. Simples.

2

Yardley Yeadon
@MichaelYeadon3

Why do you believe there's likely to be a "2nd wave"?
There's no immutable law. Where it's apparently happened before, as in Spanish flu, it's been a second "1st wave", mutations having produced essentially a new virus. No, covid19 isn't mutating to a new, more lethal, form.

I don't like wearing a mask because it doesn't feel natural. But so what. I don't see what the big deal is. If it helps life return to normal, prevents someone from contracting the virus, then yes, I'll keep wearing it.

3 17

Yardley Yeadon @MichaelYeadon3 · Jul 13

I'd do the same. The difference is I'm qualified to assess the merit of these precautions & this one has got proven no merit on it. Virus isn't airborne - proven not to be. Masks wouldn't filter it anyway - also proven negative.

1 9

Whoopie Cat @mheretohelpyou · Jul 13

The news in the last week is that it appears to be airborne, though.

2 2

Beth @Beth44330105 · Jul 14

It is not airborne. There was one obscure study with little data that was sensationalized. It is droplet. Droplet precautions are guided by the laws of physics and have worked for decades. The virus is only aerosolized with ventilation.

2 2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Beth44330105 @mheretohelpyou and 2 others

Great, I agree with you. I've much experience & knowledge on creation & administration of aerosols & respirable particles for therapeutic purposes. There are many people relying on "common sense" in areas where that's most unwise.

Well, I am not explaining excel skills here ;)

Basically, you have 3 columns.
1. Week
2. Total number original
3. Total adjusted

Look at (2) where there was a peak 2020.
Take those excess and "smooth" it back to 2019.

Thats what I mean with "shifted back".

David Colquhoun @david_colquhoun · 5h

Regardless of comparisons with other countries, isn't it obvious that, when faced with an exponentially-rising threat, that earlier lockdown will reduce deaths?

3

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @david_colquhoun @richardvadon and 4 others

Noting that peak deaths post date peak infections by around 24 days, it's clear that the striking turning point from expansion to contraction occurred up to 8 days prior to lockdown. One person told me it was the voluntary self restriction that did it. If so, why do lockdown?

7:56 AM - 16 Jul 2020

2

Richard Vadon @richardvadon · 28m

Replying to @MichaelYeadon3 @david_colquhoun and 4 others

I would have done a softer lockdown earlier, I also would have closed our borders to Europe or at least instituted a quarantine system in Feb, I would got the private sector involved with testing and tried to protect care homes. But that is with hindsight 1/2

3 1

Alistair Haimes @AlistairHaimes · 25m

At the time, until early March (I remember, largely because I had covid myself), all the talk was only really of the virus coming in from China or maybe Italy - even though most was coming in from Spain and France. Yes: hindsight is always 20/20.

So what is the next step to determine if T cells protect from severe #COVID19 ? Btw thanks for this, I get the headlines but I would need help to understand the biology... is there a lay person version of the paper?

2 1

Eva Fain BSN MPH CDE @Eva3034385615 · Jul 15

Its why 96% do not get really sick from covid19

1 3 19

mike @jeep7575 · Jul 15

It's why w no knowledge of virology people are left at the mercy of experts I thank God I do have knowledge of it. But seeing this insanity and trying to tell people who have no knowledge but are utterly convinced of doomsday is sickening.

Absolutely agree. I have experienced almost painful levels of cognitive dissonance while watching Govts do one stupid thing after another. Biggest self inflicted public health crisis ever. No doubt.

This is I believe the third, top quality lab, reporting that subjects not infected by SARS-CoV-2 have T-memory cells responsive to the new virus. In this study, up to 50% had these T-cells. They also retained memory from infection by SARS 17 years ago! As I've said for months..

> **Bertoletti Lab** @bertoletti_lab
> We find #SARS-specific T cells 17 years post infection - potentially really good news for long-term immunity and #vaccine development.

The flu season stuff is interesting. But we don't know yet.

1 1

Alistair Haimes @AlistairHaimes · 10h
This thread is really interesting on the countries that had light 2018 flu seasons => bad covid seasons, and makes the point that Germany cruises at higher mortality rates than us anyway.

> **Detective Truth** @DaFeld
> Thread.
> Did a downswing in 2019 had an impact to current situation and increased fatalaties in 2020.
> Focus are the "hard hit countries" and age group 85+
> Show this thread

1

Dogma Buster #LatestBandWagon @DogmaBuster · 10h
Surprising our biological understanding is such as we really don't even know why flu comes/goes. There are plenty of hypotheses, but mostly untestable. Also we don't know much about cross-immunity, and we talk of susceptibility as binary, but it could be a continuous variable.

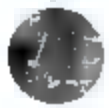
Ruminator Dan @RuminatorDan · 2h

Example: seroprevalence studies in saturated locations e.g. London find levels lower than expected if 100% were susceptible to infection. e.g. below link. imo there are issues with antibody testing but still that's a large % needing another explanation.



2 1 2

Yardley Yeadon @MichaelYeadon3 · 20m

An important point to be aware of in relation to seroprevalence studies is that by no means do all infected subjects who survive produce antibodies. I've seen estimates anywhere from just 1:3 to 1:5 so concerting. This has important implications for computing infection fatality..

1 1 1

Yardley Yeadon @MichaelYeadon3 · 17m

..rates and also proportion of the population who've had the virus. Indeed, recognising these implications while using seroprevalence data & those with prior T-memory results in estimates for remaining susceptible people low enough to imply herd immunity, which is what I think...

When do you think he should have locked down & closed down air travel, with the information available at the time, and from where?

2

David Colquhoun @david_colquhoun · 6h
2 or 3 weeks earlier. I self-isolated on March 12. Twelve days earlier than the mandate. It was obvious by then than not only from the far east, but also Italy, Spain and France what was coming.

2

Alistair Haimes @AlistairHaimes · 6h
I had already been in bed for 4 days with covid by then, just before I got pneumonia.

The last time to stop this in hindsight, not that they could have known at the time, IMO would have been to cancel half-term and introduce quarantine mid-Feb. But who could have made that call?

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @AlistairHaimes @david_colquhoun and 4 others

Quite. The big intervention which would have prevented 10,000 separate infection starting points would have been to close all the airports. In late Jan or early Feb. Seriously. I doubt anything else would have mattered, certainly not lockdown (which I think ineffective).

YOU will not get it BUT look at this from ITALY

3. Patologie preesistenti

La tabella 2 presenta le più comuni patologie croniche preesistenti (diagnosticate prima di contrarre l'infezione da SARS-CoV-2) nei pazienti deceduti. Questo dato è stato ottenuto da 2351 deceduti per i quali è stato possibile analizzare le cartelle cliniche. Il numero medio di patologie osservate in questa popolazione è di 3,3 (mediana 3, Deviazione Standard 1,9). Complessivamente, 90 pazienti (3,8% del campione) presentavano 0 patologie, 340 (14,5%) presentavano 1 patologia, 504 (21,4%) presentavano 2 patologie e 1417 (60,3%) presentavano 3 o più patologie. Prima del ricovero in ospedale, il 24% dei pazienti deceduti positivi all'infezione da SARS-CoV-2 seguiva una terapia con ACE-inibitori e il 16% una terapia con Sartani (bloccanti del recettore per l'angiotensina). Nelle donne (n=764) il numero medio di patologie osservate è di 3,4 (mediana 3, Deviazione Standard 1,9); negli uomini (n=1587) il numero medio di patologie osservate è di 3,2 (mediana 3, Deviazione Standard 1,9).

Tabella 2. Patologie preesistenti osservate più frequentemente

Patologie	Donne		Uomini		Totale	
	N.	%	N.	%	N.	%
Cardiopatia ischemica	164	21,5	498	31,4	662	28,2
Fibrillazione atriale	179	23,4	339	21,4	518	22,0
Scompenso cardiaco	150	19,0	236	14,6	386	16,4
Ictus	85	11,1	170	10,7	255	10,8
Ipertensione arteriosa	551	72,1	1076	67,8	1627	69,2
Diabete mellito-Tipo 2	240	31,4	507	31,9	747	31,8
Demenza	166	21,7	191	12,0	357	15,2

As regards uk, I completely agree. Prevalence of those with antibodies underestimated the numbers infected by 3-5x. Looked at separately using infect fatality ratios you get same near-29million cases. 30-50% of pop have T-memory cells from prior colds. The remaining susceptible..

An important point to be aware of in relation to seroprevalence studies is that by no means do all infected subjects who survive produce antibodies. I've seen estimates anywhere from just 1:3 to 1:5 so concerting. This has important implications for computing infection fatality..

Fine, but ultimately everyone answers to the highest court or to the executive.
I don't believe for a moment that PHE adopted a most unusual, novel & inaccurate method for determining covid19 deaths, as they had no incentive to do so. Govt, however, holds a stack of conflicts.

Last Saturday I was ridiculed for suggesting in the @telegraph that the U.K. may already be approaching herd immunity and we shouldn't obsess about a "second wave". Here is an Oxford team of epidemiologists coming to the same conclusion.

I've predicted this & first speculatively tweeted to this effect during April & early May. My calculations, based on a 30% with T-memory from colds, another group with strong innate immunity, coupled with nearly 20 million infections means herd immunity is imminent. Obvious.

1. Many of these tests are contaminated with Covid 19 at point of manufacture.

2. They have a very high rate of false positives.

3. Repeat tests on one individual are counted as multiple cases.

4. The tests cannot distinguish between COVID-19 and other coronaviruses (per CDC)

5. The virus has never been isolated by Koch's postulates.

6. The PCR test cannot be used for diagnosis (but is). This is because the PCR cannot distinguish between a virus and DNA detritus resulting from the destruction of a virus by the immune system.

What all that means, is that every bit of data we have - deaths, cases - is complete junk.

Which of those statements do you claim are untrue?
I'm not into conspiracy theories & this isn't one. It's a bald critique of an amplification technique, PCR, which has never been used in the way it is right now. Most biochemists would tell you it's a powerful but flawed assay.

Sure, but this is inference based evidence. I wonder if there is any direct observational stuff, as critics as @bealelab would say "sure T-Cells" just mean most people don't get it bad, which we already knew.

I think it's too early to be able to unpick the contribution of multiple immune mechanisms for COVID-19 but there's quite a bit in the literature based on SARS-CoV-1, eg this paper.

I agree. I'm not optimistic that the complex web of daftness we've woven will be speedily undone.
I'm not exaggerating to say I think our responses to covid19 represent the most disastrous public health policy error ever made in U.K.
It's arguably close to criminal negligence.

Quite funny. The driver did ask to be dragged out of his own car. Force was necessarily used because part of that daffy act could have been a preamble to stabbing the officer. As the driver wouldn't cooperate, he was fortunate merely to be pulled out & cuffed.

Being suggested to me that according to ONS figures, in the week ending July 3 nobody under the age of 30 in the UK died of/with Covid, and just 35 people under 60 and 75 under 70 died.
If this is correct then the nation is in a very strange psychological place right now.

66 328 900

Otter the Great @Jollyanna7 · 8h

Given the attached, if I get run over by bus after having been tested positive but never being hospitalised I get added to the numbers.

> Here, it seems that PHE regularly looks for people on the NHS database who have ever tested positive, and simply checks to see if they are still alive or not. PHE does not appear to consider how long ago the COVID test result was, nor whether the person has been successfully treated in hospital and discharged to the community. Anyone who has tested COVID positive but subsequently died at a later date of any cause will be included on the PHE COVID death figures.

2 3 16

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @Jollyanna7 @oflynnsocial

Absurdly, that's correct.
This effect will be contributing right now to the covid19 deaths count. I think this deliberate error is responsible for the 'flare' in the falling series.

Tanning In The English Rain @TanningRain · 6h
Fewer than 600 people < 65yrs, and with no pre-existing condition, died with/of COVID in 3 months Mar-May. All those over 65 or 70 and/or with health conditions, should self-isolate or take precautions when out and about. Everyone else should get back normal, no masks, nothing.

is there any data for that week on how many died with pre-existing conditions?

2

Lordy_Lawman @LawmanLordy · 1h
I can't find any just now. But ONS do produce those numbers. I know it's over 90% of deaths occur within people who have at least one of the main pre-existing conditions.

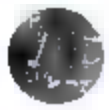
Ryan @LongDesertTrain · 6h
Yeah, the Atlantic article didn't go into much detail on the chaos aspect—I'm guessing because it's too technical. Still, I found it surprising that even the mathematician who runs the simulations essentially said they have no idea why their model keeps turning out HIT under 20%.



2 1

Ryan @LongDesertTrain · 6h
"She can't say why the threshold in her models is consistently at or below 20%, but it is. 'If heterogeneity isn't the cause,' she said, 'then I'd like for someone to explain what is.' "

It's disconcerting to me that they can't even say why their model gives the results it does

Why? Ferguson had no idea why his outputs were so laughably bad. I had several things he missed so I knew he was hugely out. I didn't know about the effect of how mixing / spread works.

Much the same, the virus stopped spreading exponentially before the lockdown measures could have any effect. Data from Germany and Sweden suggests same. Once ~15% are infected, virus declines, it has picked off the low hanging fruit. Most people have innate T cell immunity.

Replying to @PhilipD51977782

Govts if they're secure don't yield to pressure. Asked to guess, SAGE & the CSO wouldn't come off the fence & in the end, Boris followed suit. In the end, the worst decisions were discharging to care homes & keeping NHS focused only on virus. 10000s died non covid19 lack of care.

Philip Dunn @PhilipD51977782 · 48m
Replying to @MichaelYeadon3
Ok, I can see how care home patients were sent home? to presumably make room for potential Covid patients! Having looked at the data I can see that there were a total of about 20,000 deaths reported out of 9000+ care homes, which is an average of 2.22 deaths per care home ??

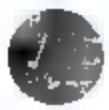
2 2



Irate Debate @MintIrate · 11h
Yes, lockdowns don't work.

1 1

Enjoy the hood x @blixberrie · 11h
We barely had a lockdown and when we did it was late. Hence the high death rate compared to other countries. Look at Japan, Sweden etc. Let's not rewrite history.

2 1

Yardley Yeadon @MichaelYeadon3 · 1h
No. That's incorrect. Our high death rate almost certainly was due to a mild flu season last two winters so large nos of vulnerable elderly, and huge no of infected people arriving by plane from Italy, France, Spain before we even thought of lockdown. Countries with bad flu...

1

Yardley Yeadon
@MichaelYeadon3

would you take it?

21 5

Nav_Intell_Analyst @IntellNav · 22h
Hell no!!!

It can make drinking water safe, kills parisites, germs, bacteria, in so many gallons of water.

Take the pill or make it a liquid and you'll you'll get very sick or die.

Use the liquid to disinfect counter tops etc., wear plastic gloves. It can be skin absorbed!!!

5

Chris SC @CoteCo50310479 · 9h
Why do you say hell no and then say it makes drinking water safe?? That doesn't make sense

He was quite clear. “A few drops in drinking water” isn’t going to more than a minuscule amount once you take a glass of water. It’s all about dose & dilution. As Paracelsus said “sola dosis facit venenum” (“only the dose makes the poison”).

Personally I don't believe that. The change to assignment of death is so marked & wholly without precedent that I don't believe so middle management functionary signed that off. I've worked in big corporates. You'd need senior sign off.

In thus case those upper numbers are impossible because a large proportion of the population started in the not susceptible camp. Don't modellers read the real world literature? And we let them loose on policy makers?

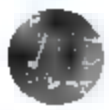
Every suspect arrested for an alleged serious sexual assault has their phone seized & their entire digital life examined. Ask yourself why Vera.
Then ask yourself why an accuser should not also have their digital life examined. Many false accusers have been exposed in this way.



> **Victims Commissioner** @VictimsComm
> This form should never have been used. It's driven many victims away & some rape cases may have fallen because of it. Other victims have had unnecessary intrusions into their privacy. The CPS should review every case it's dropped with a view to reconsidering whether to prosecute

3 10 22

David #DemocraticDeficitUK #UBI #ProEU @Snyberwiz · 7h
I'm sure I'm missing something but why is the contents of a phone or past behaviour relevant. Like any violent attack, rape or sexual assault is something that happens at a point in time. Even if the victim said "yes" before he/she is entitled to say "no" at a later time surely?

2 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Snyberwiz @PipSinks

In most rape cases, only 2 people were present. When only 1 was conscious, it can simplify. What we usually have is no more than an accusation & a denial. This leads to low trial rate, because the 'beyond reasonable doubt' threshold cant be passed. Digital evidence can swing it.

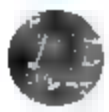
CD4 count in a human is the defense mechanism by which the body fights off a virus. If you have a good CD4 count the virus will give up and if your CD4 count is down by any other secondary disease then it rips your lungs first by giving you pnemonia taking down those saturations.

1



Sunday B. Fakus @SamJohn79394079 · 14h
Lastly we are all screwed bigtime. It just like a rollercoaster ride. The first experience is thrilling for all but deadlier too if you have a heart condition. So each time you take those breaths that you take in for granted thank your good lord for them. Just sit back and relax.

1

Sunday B. Fakus @SamJohn79394079 · 14h
I dont even get applause by giving you all this knowledge for free here. My motto in life the more you give the more you get. Stay home stay safe and sound and please wear mask so that you can protect your upper respiratory tract at all costs. At least believe me when I say that.

Colin Troy @feetsby · 7h
That there, is the worst Covid death rate graph in the world. Product of the UK's lax lockdown policy. The message in red is a dangerous lie; without the masks, the graph will go back to where it was. One Covid case in NY, using an elevator once, infected 72 people.

2

It has nothing to do with sperm counts or the usual things that come to mind when discussing fertility.

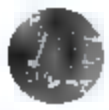
Instead it is being driven by more women in education and work, as well as greater access to contraception, leading to women choosing to have fewer children.

In many ways, falling fertility rates are a success story.

2

Yardley Yeadon @MichaelYeadon3 · 9h

I doubt the personal opinion of one person, male or female, would add much to the topic. Whoever presented the story, I would hope they know their subject. Too often we don't get even that minimum standard met!



1

Kate Smurthwaite @Cruella1 · 7h

Oh I meant one of the many women who has studied this in great detail. But failing that, yeah literally any woman on earth could have contributed to this discussion because it is about us.

Try reading the research you are posting.
It's a comparison of cloth masks with medical masks.
A bit like comparing a piece of string verses a seatbelt. In a seatbelt wearing campaign.

...much reduce transmission either by aerosol (expected: pores are relatively large) or by dropping contaminants, which are thereafter touched by others. Most people aren't using med grade masks. The face cloth group actually did the worst, with lab confirmed infection risk up.

Cris Rocholl @CrisRock763123 · 1h

Replying to @MichaelYeadon3 @agoose77 and 4 others

They are not a panacea we know that, but a reduction from 97% to 44% particle penetration is not insignificant. However the tests should be more about control of the aerosol from the wearer, if you can restrict the virus at source you can reduce the load.

On the contrary, as the number whe were infected & then died within a few wks falls, the background numbers who tested positive but survived, only to die later, could become dominant. Consider the situation when the former trends to zero. We'd still have a count of the latter.

2:19 AM - 19 Jul 2020

if you say the numbers are down by 300 a week then you have all the excess happening in the last 5 or 6 weeks at the most.What changed in the way things were counted for this to occur?

1

Yardley Yeadon @MichaelYeadon3 · 5m
I haven't said a particular number, but I'd predict the error if any would represent a roughly steady contribution, which would become important on trends only once the 'standard' death numbers fell to say, no more than twice this possible background. Anyway we'll soon know!

Passed on to other ethnicities but unrelated to the animal/primate kingdom. All blacks are RH positive. Anyone white even if Rh positive originally came from RH Neg humans. Celestial bro.

1 1

Wingright @Glenlo · 13h
Im 0 positive ... I think

1

Jim Reeves @Jim_Reeves194 · 13h
I can guarantee your european ancient ancestors were mostly negative. A lot of positives have neg blood children. But the RH D Negative deletion is explicitly european genetically derived. It's a mystery but it separates us from primates. Even RH D positive whites too.

2

Jim Reeves @Jim_Reeves194 · 13h
It pisses racist Africans off as they're linked to primates but all Europeans are not. We all share a common ancestor but something mysterious happened with Europe. I don't know but I like to say it's celestial. Unexplained.

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Jim_Reeves194 @Glenlo @MarkACollett

I think you must have stepped out during genetics 101. We are not just related to primates but we are all primates. Hence, when certain animals are used in medical research, they're called NHPs (non-human primates).

They haven't verified it. They've used indirect measures & assumed it translates to real efficacy. It doesn't.

mesonparticle @mesonparticle · 3h
Your linked study is meaningless in this context, it's comparing cloth masks with medical masks as a preventative measure for the wearer. This is NOT why governments are enforcing mask wearing - its to limit TRANSMISSION from someone infected and/or potentially asymptomatic.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @mesonparticle @Doctor_of_Music and 3 others

I disagree with your characterisation. In the context tested, HCWs are arguably more likely to be the source of infection as it's target. They move around freely, potentially both leaving contamination as well as picking it up. The endpoint shows they're not protective.

I would like to make a public apology. Today I arrested someone and he didn't want to be arrested so resisted. I used a legal and reasonable amount of force on him and for that I apologise.

David Ridley @DavidRi60780188 · 5h
And it's about time the "no comment" defence should be dropped. Everyone questioned by the police should be required to answer questions & a no comment response would be regarded as proof of involvement in the offence. It is 2020 not the Middle Ages

not. We all share a common ancestor but something mysterious happened with Europe. I don't know but I like to say it's celestial. Unexplained.

1

Yardley Yeadon @MichaelYeadon3 · 9h
I think you must have stepped out during genetics 101. We are not just related to primates but we are all primates. Hence, when certain animals are used in medical research, they're called NHPs (non-human primates).

1

Jim Reeves @Jim_Reeves194 · 4h
I also mentioned we all share a common ancestor. Point I was making was solely regarding RH D Negative, this is not found in NHPs. A lot of Euros are RH Neg or carry it recessively. Black racists like to say whites are genetically non-human, because we carry neanderthal DNA.

Jim Reeves @Jim_Reeves194 · 3h
Replying to @MichaelYeadon3 @Glenlo @MarkACollett
From what I've read, Neanderthal's lived through a number of ice ages and probably were not a stupid as people like to think. I've also heard that non sub-Saharan people's amongst them have about 50-60% of the Neanderthal genome but this only equals about 1-4% in most people.

cause colds). But the immune repertoire before SARS-CoV-2 infection likely differs from the repertoire needed to adequately address SARS-CoV-2, and the repertoire from dealing with seasonal coronaviruses may be ineffective in addressing SARS-CoV-2. In fact, the immune response to seasonal coronaviruses may not even strongly protect against re-infection with seasonal coronaviruses within 12 months, let alone protect against infection with a novel coronavirus such as SARS-COV-2.

Third, high rates of SARS-CoV-2 transmission in situations with large concentrations of people shows that there are enough immune-susceptible people for the virus to find and infect, as per citation [40].

Fourth, the article suggests that enough herd immunity may already be in place to mitigate a second wave (including herd immunity in cases in which only 10–20% of people positive for antibodies against SARS-CoV-2). An

I'll read more, but meta analysis can't make a silk purse out of a sow's ear :)
"Our search identified 172 observational studies across 16 countries and six continents, with no randomised controlled trials and 44 relevant comparative studies..".
RCT = gold standard, if doable.

unprecedented global health crisis, such seroprevalence data will continue to be necessary for public health authorities to estimate exposure rates, especially in areas with little testing capacity for acute cases. If and when a vaccine is widely available, ongoing seroprevalence studies will be able to provide information about the extent and duration of vaccine-induced herd immunity.

...European states, the shape of the daily deaths vs time course are almost identical? Why they are all trending towards normal death rates? Why infection rates have decayed almost to zero despite increased mixing?
May I ask if you had to guess what value for IFR you'd use?

light of these findings, any proposed approach to achiev... infection is not only highly unethical, but also unachievable. With a large majority of the population being infection naive, virus circulation can quickly return to early pandemic dimensions in a second wave once measures are lifted. In addition, the geographical variability and the dynamic of weekly increasing seroprevalence rates during the early phase of the pandemic highlight that these studies are only snapshots in time and space, and reflect the circumstances of the period in which they were done. As we are still in the midst of an unprecedented global health crisis, such seroprevalence data will continue to be necessary for public health authorities to estimate exposure rates, especially in areas with little testing capacity for acute cases. If and when a vaccine is widely available, ongoing seroprevalence studies will be able to provide information about the extent and duration of vaccine-induced herd immunity.

Replying to @Warnzwifey @ShamanicNights @HegKong

For me, this is the key concern. I have but an outline understanding of this field & as you'd expect, there is no a priori reason to expect serious adverse events.
However, this needs to be demonstrated through collection of much data including considerable time after dosing.

The current situation in UK is so frustrating. We know the Covid stats were inflated. Deaths are now v.low. Test & Trace breaches GDPR rules. WHO doesn't deny political pressure was exerted on it re mask advice . Yet despite us knowing all this, the whole charade continues!

98 785 1.7K

seer @mitchmusic · 14h
We don't know deaths were low, the spikes were consistent with COVID cases in terms of the time of their occurrence. Sorry, but there were some rogue cases, but this is nonsense Neil and you are better than this.

2

MrXeis @MrXeis · 7h
He actually says "deaths are low" presumably the current tense. It does appear we are coming out of this as we introduce these guidelines, but I have to think those in the know are not just making us all wear masks for a giggle.

1 1

seer @mitchmusic · 5h
Trouble is our testing program is so pathetic, no one really knows anything in detail, so in essence it's everyone for themselves. As you say, making masks compulsory, yet somehow also optional is like Cummings taking the proverbial.

1

Yardley Yeadon
@MichaelYeadon3

Rang my GP to request an in person appointment. I'm told that the GP has to decide if this is needed (instead of over the phone). Don't believe @MattHancock's lie the NHS is not fully open. Neither could they tell me when they plan for service to return to normal.

It's not just the NHS. It's as if the private sector has suborned itself to the state, even though no private hospitals are needed for covid19 workload reasons (were they ever?). Bottom line: it doesn't matter if you've ability to pay. Lots of private facilities aren't operating.

Just a question from "Clueless of Norfolk," but won't the Quran have to be rewritten to remove the hateful word "jihadis"?
While at it, why not have a Quran New Testament, and remove all hatred?

The current situation in UK is so frustrating. We know the Covid stats were inflated. Deaths are now v.low. Test & Trace breaches GDPR rules. WHO doesn't deny political pressure was exerted on it re mask advice . Yet despite us knowing all this, the whole charade continues!

102 804 1.8K

Paul Fallon @PaulFallon67 · Jul 20

And the way that we break it is by not complying with mandatory mask wearing, because having ordered it on public transport and from Friday in shops the government won't stop there. Boycott retailers which enforce mask wearing and e-mail their Customer Services to let them know.

1 2 31

Zer0 @Zer0DayScience · Jul 20

When you say "so-called social distancing" does that infer that during this entire time that people have been making a national effort to reduce transmission, and been successful at it, you've been walking about refusing to respect people's space in public? Hows that gone down?

Follow

Replying to @Niall_Boylan @Allycon3

I don't know how to run a poll & don't want to anyway.
But I'd be interested in a follow up question or even an entirely separate question:
"Do people believe that, as used, masks reduce infections in others?"
Might be against it, if they don't believe the intervention works!

Serious question.

If it weren't for the media, how would you know there was a COVID 'epidemic' at all?

I wouldn't.

Nobody I know has caught it..and most of my friends are 50+

282 643 2.1K

David Clark @daveguitarclark · Jul 19
You've asked for it now squire:
"I know a bloke whose milkman's mum had it". "I am a front line OurNHS worker (kitchen porter division) and you wouldn't say such things if you knew 15 people have died in our hospital in three months".

4 10

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @daveguitarclark @latimeralder

That's roughly one death a week. I don't think that would qualify alone as a crisis. Roughly 1500 people per day die (all causes mortality) rising to over 2000 per day in winter.

These masks are recommended to be worn with a mask to cover the n95. This isn't new news...It is advised that a second mask be worn over the n95. This way the wearer will be protected under high risk situations and the "bystander" will be as protected as those wearing cloth masks

33 9 82

Joel Goehner @jgg6163 · 15h
... you're suggesting we wear two (2) masks??

2 2

Kim #BlackLivesMatter @KimDuke · 7h
I do it. An N95 with valve (that I had pre pandemic to wear during bad air quality days because I have asthma), with a procedure or cloth mask over it. Makes no noticeable difference in breathing effort. Protects me and others.

Seriously, if you can breathe in & out with no noticeable resistance, it cannot be doing much filtering. Maybe quiet tidal breathing, but not once you're moving about & pushing 30L/min air through the mask.

Regarding seatbelts there were the same oppositions as for masks.
Infringement of rights, belief they would cause people to drive more dangerously as they felt 'too secure', risks of deaths caused but seatbelts etc.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @ItalianSaints @MarkGardner_Art @NeilClark66

I say again, seatbelts saved thousands of lives in their first year. Masks against respiratory viruses have been tested & made zero difference to transmission. If you see things differently, that's fine, but that's the basis of my differing view.

4:06 PM - 21 Jul 2020

2

Italian Saints @ItalianSaints · 9h
Replying to @MichaelYeadon3 @MarkGardner_Art @NeilClark66
Advice on masks is based on testing relative to their use in professional settings. Can a mask be 100% effective for a doctor etc. In that case the answer is no. This is interpreted as a NO wrongly for use as a population where even 50% effective is enough to make a difference.

Italian Saints @ItalianSaints · 2h
Replying to @MichaelYeadon3 @MarkGardner_Art @NeilClark66
Back in February many Asian countries had their first Covid cases. Korea had experience with SARS and their protocol is to wear masks combined with other measures. They controlled the spread far more effectively than the UK. Big picture thinking would have it that the do work.

The literature is not clear about lack of benefits. That's simply the spin the government has put on it. Why would doctors, dentists, nurses wear masks in operations and need PPE etc? If they said they were effective then they would run out of masks for highest risk groups.

The current situation in UK is so frustrating. We know the Covid stats were inflated. Deaths are now v.low. Test & Trace breaches GDPR rules. WHO doesn't deny political pressure was exerted on it re mask advice . Yet despite us knowing all this, the whole charade continues!

104 824 1.8K

Mark Gardner @MarkGardner_Art · Jul 20

deaths are highest in the world per million. Not " very low"

2

Yardley Yeadon @MichaelYeadon3 · Jul 20

True. But they've already happened. Where we are now is very low death rates. Far, far lower than for example the daily deaths from flu each winter.

4 1

Mark Gardner @MarkGardner_Art · 18h

What do you mean, "they've already happened"? Instead of assuming I don't know how time works maybe concentrate on how death numbers are as high now as when we went into lockdown...

1

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @MarkGardner_Art @NeilClark66

Yesterday, 11 they said. I am attracted to the persistent fall in daily numbers of deaths. Not how the numbers compared months ago, when they were clearly rising fast. Do you agree the direction matters? If not, why not? We have more flu deaths per day most winters.

This is alarming. While no one expects serious adverse effects, that's why you must run proper clinical trials. Medical science is full of surprises! I'm not sure they even have adequate short term safety, as the volunteers were I think 18-55y. Most people in the 'vulnerable'...

2 1

Absolutely. And in any case, in a civilised society, no law must require a person to shoulder a risk solely for the benefit of others. A massed vaccination campaign if ever mandatory is in my view unethical as well as illegal.

There is a school of thought that HMG are pushing masks for economic reasons - get the nervous out and about. There should already be data on this for Scotland and that needs to become public (as well as a close watch on what actually happens in England post the 24th)

Illogical. I don't like masks so, add it to an activity I already barely tolerate & bingo! People like me will simply steer clear of all setting where masks are required. If it's a year, so be it. I doubt I'll miss it much.

Christine Brett #UsforThem @ChristineBrett8 · 12h
Yet representation in msm doesn't reflect that. All we hear is teachers voice, unions and schools. No word of the poor parents struggling.

1 2

Liska @NewMumOnline · 12h
we're the more accurate advocates for kids. When it was all kicking off in April May I simply expressed disappointment that my son would have appreciated a phonecall from his teacher a teacher on here POUNCED on me with more than 1 tweet to say his wellbeing was my priority alone

1 2

Liska @NewMumOnline · 12h
I couldn't understand that if 2-5% children were in, and we were not receiving any tailored online learning, that the odd personalised email or phonecall wouldn't go amiss. I know some schools are teaching online (whole of Scotland) but many were not, including ours

1 1

Christine Brett #UsforThem @ChristineBrett8 · 11h
I think it typified the school home relationship - one way. They supplied work at best but no thought to the pressures parents were under to even manage their own jobs. I'm seriously concerned of how they will cope with kids going back after such a long absence

These masks are recommended to be worn with a mask to cover the n95. This isn't new news...It is advised that a second mask be worn over the n95. This way the wearer will be protected under high risk situations and the "bystander" will be as protected as those wearing cloth masks

33 9 82

Joel Goehner @jgg6163 · 15h
... you're suggesting we wear two (2) masks??

2 2

Kim #BlackLivesMatter @KimDuke · 7h
I do it. An N95 with valve (that I had pre pandemic to wear during bad air quality days because I have asthma), with a procedure or cloth mask over it. Makes no noticeable difference in breathing effort. Protects me and others.

1

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @KimDuke @jgg6163 and 2 others

Seriously, if you can breathe in & out with no noticeable resistance, it cannot be doing much filtering. Maybe quiet tidal breathing, but not once you're moving about & pushing 30L/min air through the mask.

Feel free to wear 1 where you're required to. It won't be effective. Best to avoid crowds, keep distance if you must go there, NEVER touch your face after leaving home until back & washed hands. It's very difficult to avoid face touching but IMO that & washing is key.

2:17 AM - 23 Jul 2020

1

Jaymar Publishing @jaymarpublishin · 6h

Replying to @MichaelYeadon3

Thank you, that's very helpful. So your solution is stay indoors for the rest of my life and avoid other ppl? Guess I'll see you in the same mental ward in a few years.

2

Yardley Yeadon @MichaelYeadon3 · 6h

That's the problem of shielding, which some need to do. My own estimation: in U.K. at least, you'd have to be v unlucky now to catch this virus as prevalence is very low, last week ONS said around 1 person in 4000. I'm ignoring it now as it's mostly a fear based phenomenon.

alternatives... but surgical masks do not fall into this category.

As a scientist, you will also know that cherry picking one..

2

Brexit_Warrior @WarriorBrexit · 5h

study that supports your viewpoint is not good science. Especially if the methodology isn't exactly asking the question you are seeking to answer, which I don't feel this paper does.

This narrative literature review paper by Prof Trish Greenhalgh in Oxford describes the broad

1

Brexit_Warrior @WarriorBrexit · 5h

range of evidence is some detail and I think provides a fair balance. The bottom line is that surgical masks do provide a degree of protection from people emitting viral-filled droplets when speaking or coughing and that can only be to the benefit of the wider public.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @WarriorBrexit

I agree the theory is strong. That the indirect empirical evidence runs counter suggests our theories on what's important in transmission may be incorrect. I'm wondering how we know that community transmission in places where masks are to be worn are important? If they're not...

Andrew #KBF @AHickinbotham · Jul 20

Rang my GP to request an in person appointment. I'm told that the GP has to decide if this is needed (instead of over the phone). Don't believe @MattHancock's lie the NHS is not fully open. Neither could they tell me when they plan for service to return to normal.

121 237 681

Priceless2020 @Priceless20201 · Jul 20

This government don't care because they can afford the private care that reopened face to face appointments in May. So many people are being affected by this but still no plans to re-open before another wave- such a disgrace!

What canon should an Anglican Church choir perform? I was in a church choir as a school child in the late 60s. Very traditional & most enjoyable. If I visit a church in England, hear an organ playing & smell the musty odours of a 1000 year old building, it pulls me back 1/2 a C.

If you are, statistically, very unlikely to die in the period covered by the insurance policy, it will be low cost relative to the pay out for the insured event. Try it when you're older, less well & more likely to need it. Sadly, the tables are then turned.

People who are wearing masks are saving your life. Think, and return the care.

74 21 766

Karl Watchtay7 @kvwatchtay7 · 8h

The NEW ENGLAND JOURNAL of MEDICINE

Universal Masking in Hospitals in the Covid-19 Er

May 21, 2020

We know that wearing a mask outside health care facilities offers little if any protection from infection. Public health authorities define a significant exposure to Covid-19 as face-to-face contact within 6 feet with a patient with symptomatic Covid-19 that is sustained for at least a few minutes (and some say more than 10 minutes or even 30 minutes). The chance of catching Covid-19 from a passing interaction in a public space is therefore minimal. In many cases, the desire for widespread masking is a reflexive reaction to anxiety over the pandemic.

I respectfully disagree. My view isn't controversial. Many clinical leaders have expressed considerable alarm at how low the routine but important numbers of urgent referrals for cancer investigations have become. Similarly, cardiologists say acute admissions are way down.

Does anyone know anyone who voted Brexit because of social media?

I don't.

406 216 2.7K

Lord Stephen Bell @SteevBell · Jul 22
Funnily enough, I don't know anyone who voted Brexit because of a bus either. I do know people who voted remain because of threats of an emergency budget and a belief that there can be no peace without being in the EU though.

Amy M @CirqueAmy · 5h
Chromosomes: XX=female and XY=male, right? Not always. See Intersex for more (isna.org)
Gonads: testes vs ovaries
Hormones: testosterone vs estrogen
Anatomy of internal genitalia: corpora cavernosa vs vagina
Anatomy of external genitalia: penis vs clitoris

15/?

1

Amy M @CirqueAmy · 5h
Let's go back to hormones. Males product testosterone and females produce estrogen. But! Females also produce testosterone, and males also produce estrogen. When comparing the hormone blood levels across sexes, guess what we find? A bimodal distribution!

16/?

Replying to @CirqueAmy @Nhamtn @NadiaWhittomeMP

Would you be so kind as to display the graph or figure which illustrates the bimodal distribution of the principle sex hormones you listed?
I start with not knowing what it looks like. I'm wondering if the overlap of say testosterone is much less clear that it is for height?

I start with not knowing what it looks like. I'm wondering if the overlap of say testosterone is much less clear that it is for height?

1 1

Amy M @CirqueAmy · 48m
I'm not finding a chart, but here's a quote from a study (onlinelibrary.wiley.com/doi/full/10.11...) about testosterone-levels: "In the healthy, normal males and females, there was a clear bimodal distribution of testosterone levels, with the lower end of the male range being ...

1

Amy M @CirqueAmy · 47m
... "four- to fivefold higher than the upper end of the female range(males 8.8-30.9 nmol/L, females 0.4-2.0 nmol/L)."

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @CirqueAmy @Nhamtn @NadiaWhittomeMP

Thanks. At a quick glance, to which there'll surely be exceptions, it appears that the normal upper limit in females doesn't overlap with the normal lower limit in males? Testosterone levels alone would correctly identify sex almost every time (unlike height).

It's too early to judge. You need to see total deaths & that may not be known for a couple months of years. Note that Sweden may be immune at the end of the first wave. Other countries may suffer repeatedly.

Mari @Mari57084783 · 16 apr.
What do you think of the temperature screening at schools or workplace? With 40-50% being presymptomatic, is it even serving the purpose of "screening"? Would it be better to keep it shut down?

What do you think of the temperature screening at schools or workplace? With 40-50% being presymptomatic, is it even serving the purpose of "screening"? Would it be better to keep it shut down?

Personally I wouldn't screen ag school. School children are as close to invulnerable as humans can be. Sweden didn't close their schools. Denmark reopens theirs next week.

Sweden have massively messed up in comparison to the other nordic countries.

1 1

Yardley Yeadon @MichaelYeadon3 · 19 اپریل

It's too early to judge. You need to see total deaths & that may not be known for a couple months of years. Note that Sweden may be immune at the end of the first wave. Other countries may suffer repeatedly.

If the children have no contact to grown ups that's ok. If they will see their parents or grandparents, it's deadly

What do you think of the temperature screening at schools or workplace? With 40-50% being presymptomatic, is it even serving the purpose of "screening"? Would it be better to keep it shut down?

Yardley Yeadon @MichaelYeadon3 · 7h

Thanks. At a quick glance, to which there'll surely be exceptions, it appears that the normal upper limit in females doesn't overlap with the normal lower limit in males? Testosterone levels alone would correctly identify sex almost every time (unlike height).

1

Amy M @CirqueAmy · 7h

Well, sort of. There are a variety of medical conditions which would throw such a test off. Some are fairly common, such as PCOS, while others less so, such as CAIS.

The purpose of the linked study was to help refine requirements for trans athletes to participate in sports.

1

Amy M @CirqueAmy · 7h

I think it will turn out to be quite useful for that purpose.

I haven't found a graph for estrogen levels, but there is considerable overlap between sexes. In adult males, estradiol levels range from 10-40 pg/mL, and for pre-menopausal adult females, from 15-350 pg/mL.

1

Amy M @CirqueAmy · 7h

Estrogen is a little more difficult to compare because for pre-menopausal adult females, levels vary depending on their menstrual cycle.

I think it's beginning to dawn on people that the 'New Normal' of mandatory masks & SD is meant to be permanent. The way that 'Covid-19' has been dropped & replaced by 'Coronavirus' should raise alarm bells. The trouble is when most people do wake up it'll be far too late to stop

104 480 1.2K

Warrior Fitness @fitnesshirt · 6h
I don't think many people will wake up to it to be honest, most people are too far gone already, like zombies. No matter what the new rule is now people are just going to say "yes master" without questioning and not realising how ridiculous it all is

3 2 17

Bean Kennedy @BeanKennedy1 · 5h
You are all nuts! I honestly don't get it. No, we aren't zombies. Yes, we have got brains. Some people wore masks way before this useless gvt asked us to. They wore masks in New Zealand and now they don't need to and they aren't. I've tried, but I cannot understand you.

7 3

goodcanprevail @goodcanprevail · 3h
Have you researched the end of this? As in, life under agenda 2030 and after the Grand Reset? If you do you can then see the steps all leading directly there. If you can't if all seems random and won't make sense to you. Icke's interviews are always very clear

Would anyone miss the BBC if it stopped broadcasting?

1.0K 264 1.9K

Gary Holman @GaryGaryholman · 9h
Stopped watching and listening to most BBC some time ago. I like the local news programme at 1830 and if it weren't for the missus and some of her progs I would cancel the fee. The breakfast programme is banal and the sedition in all their national news is dreadful. Bloody shame

3 4 34

John Clegg @Johnimator00 · 6h
Sedition? Do you mean the reporting of a govt's incompetence ?
Or should the Beeb just talk-up the govt?

Interesting hypothesis & good use of data, which is consistent with predictions arising from that hypothesis.
While these findings don't prove the point, directionally they mean it's unlikely teachers will have a tougher time with the virus if they acquire it from their pupils.

Aaron @AllenMavis2 · 23h
And that will balance out as we get closer to the end of the year as we know fir a fact a large proportion of those deaths were people who would have died of other ailments anyway. Its not "excess deaths" until the end of the year.

1 5

Peter Ottaway @pete_ottaway · 22h
Not sure you understand how excess deaths work

2 14

Yardley Yeadon
@MichaelYeadon3

Replying to @pete_ottaway @AllenMavis2 and 3 others

Yes, I think they do. It maybe that you do not?
We're now 'running cold' in weekly deaths and have been for weeks. Each 'deficit' vs prior years removed that number from the so far excess number (which could theoretically reduce to zero). That's why a full year is needed.

I bet they were 100% compliance here and in my wifes shop. It isnt enforceable if you dont want to enforce it but it is against the law.Shops should have appropriate warnings up and if staff are asked should say as my wife does that yes you have to wear one.

2

Yardley Yeadon @MichaelYeadon3 · 1h
I think many people do not believe masks make any difference. They're not wrong, either. People are using all sorts of random coverings work in irregular ways which can be seen not to work.

1 2 6

Latimer Alder @latimeralder · 1h
If you wear a mask 'to protect others', it only does so if you have the disease to start with!

Govt figures are that just 1 in 2000 has it.

So 1999 times out of 2000 masks are totally pointless.

Who's been waiting for Doctors to finally have the courage to speak out?
Not in the UK of course, where the socialist monopoly of the NHS holds a lot of power over a doctor's livelihood.

EM KA ™ (@EMKA17 on PARLER) @EM_K...

HERD IMMUNITY!

If you are asymptomatic & you tested positive, YOU ARE IMMUNE

Show this thread

17 326 332

David May @davefromglossop · 10h

Isn't Herd immunity what people were kicking off about in March ? You know, let everyone catch it , kill the old folks & we'll be fine? Then people started dying! I wish all these theorists would explain why people are dying but not in the numbers that fit their theory. Sheesh!

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @davefromglossop @NickMalyon1 @RachelBrexit14

If your question is why are the numbers of covid19 deaths per week low now, the answer is a form of herd immunity. No question.

If you test 90000 more people one week than the previous, why would it be a shock if you found around 200 more cases..

This was the case recently and no one in the media explained.

Utter filth how people are being scared and told a false picture of current situation.

40 252 1.3K

datatosee.com @dontbetyet · 6h

Shame Bojo or the wicked witch of the North don't understand that. This is the second wave of Europe but in % of positives. Yep no Europe 2nd wave as it stands

datatosee.com @dontbetyet

Yeah wow look at these massive 2nd waves. This is % of positive tests. Looking at pure numbers is just pointless but works if you want to control people.....

7

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @dontbetyet @EssexPR

I don't think it's correct to call it a second wave. As a concept it has no underpinning science anyway.
It'd be fairer to call it a reemergence of the first infective episode.

Hold yer 'orses #WAMSPAM @BreezerGalway · 5h
Point being one understands better the number of infected. More infected leads to potential more deaths. Fact.

1

Adam Brooks @EssexPR · 5h
That's not equating to deaths or even hospitalisations atm and hasn't done for many weeks.
The data of those has continued to drop very low

1

Hold yer 'orses #WAMSPAM @BreezerGalway · 5h
Sorry, my point being more testing will result in more confirmed cases. More confirmed cases would lead to more deaths if no measures were in place, hence the need for masks and social distancing etc.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @BreezerGalway @EssexPR

If you reread your post, you're saying more tests gets us more confirmed cases & ultimately deaths. But if no tests were run at all except on corpses, we'd have the same # of deaths. Community testing is pointless.

Seriously doubt it. Bet against the US dollar if you're feeling very lucky. Preferably don't bet by ensuring whatever savings you have are in several reserve currencies (USD, GBP, CHF, JPY, EUR). Did I miss any?

Sweden didn't close schools. No unusual outcome data on kids, parents or teachers. Denmark was convinced & rapidly reopened their schools months ago. Same outcome. Tumbleweed.

Anyone who favours school closures for fear of covid19 MUST also favour closures EVERY winter. There is no doubt that influenza kills a small no of children each year. Kids are also a major vector of flu to seniors, who die in thousands, despite vaccines. We do not close schools.

Well said. There have been no reopenings of schools which were followed by unusual levels of illness in children, parents or teachers. It is also the case that those who have or work with children have LOWER rates of covid19 deaths. It's obvious why. People are ignorant.

Perhaps when you're 60, but 96?

1 6

UK Urbanite #KT4PM @UKurbanite · 2h
This is a promo, but it gives you an idea of the complexity.

As I see it, anyone who's able to look after themselves at home should be able to manage, and if they live with others, then so much the better.
Similar devices seem to be about £20.

We own one of these. It's very easy to obtain invalid measurements. Done well, they can be v accurate.

I'm familiar with medical kit. I even own a small ultrasound machine, which was literally a life saver in my early days of managing my bladder after complete detrusor failure.

Replying to @Cyruschops @helenhims @LonsdaleKeith

Joking aside, but from friends in various aspects of medical profession, that's exactly it. The officials assume there'll be a second wave. There won't be. Meanwhile, patients / payers can drop dead. Govt also hired most private provision, too.
My recommendation is Don't Get Ill.

This is a good thing. You'll notice the authorities aren't telling you about high death rates. That's because they don't have high death rates. The virus is running through the highly social younger cohorts. They're not ill; now they're immune & are 'fire breaks'. A good thing.

Replying to @samdalefox @27476b54549e462

Why is it concerning? They're not getting ill as most cases are young. Each person is then immune & will not get severe covid19 nor transmit the virus.
If they were seeing high death rates, different story. But that's not what's happening.

This was the case recently and no one in the media explained.

Utter filth how people are being scared and told a false picture of current situation.

56 397 2.0K

Dippy Tango @DippyTango · 19h
We still have a 30% false negative I believe, i.e. the test is only 70% accurate (I have not seen that updated even though the media talk numbers like they are facts rather than best guesses which they will remain until there is a reliable test)

2

Yardley Yeadon @MichaelYeadon3 · 14h
I doubt it's anywhere near that many false negatives.
I'd expect a lot of false positives however.

@molinespinto @MolinesPinto · 3h
False negatives are much more likely due to failure to carry the test out correctly

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @MolinesPinto @DippyTango @EssexPR

Maybe. For you to say this so confidently you have perhaps seen a report or paper that goes through risks to accurate & precise results. I've used PCR quite a lot some years back. You can get these tests to very high false positive rates by running a cycle or two too many.

Went for a walk, saw a paramedic neighbour on a bench in an open field wearing a mask. Started talking. He said that I don't understand anything about this virus, and that we ain't seen nothing yet because the second wave would kill us all. This is what they are being told.

The question of what are the benefits of Brexit that makes up for what we're losing still remains unanswered. It looks like the main reason for voting leave was racism and xenophobia. Remainers tend to be open minded, tolerant people and see these as appalling reasons.

2 2

Anthony slides down the Cursus Honorum @manwil83 · 5h
Seriously mate, if after all this time you can't think of even 5 tangible benefits then I wonder about your capacity to reason. You can still belive its a massive mistake but you should be able to think of 5 good reasons to do anything, esp after 4 years of thinking

2 1

Colin Martin #FBPE @ColinByTheCoast · 1h
No, can't think of one.....

A benefit

How it will culturally or financially improve the U.K.

How this makes up for something we're losing.

There again I never could so I await this marvellous new world I can't work out (irony)

On Brexit, I was too dismissive of Brexiters. While I will always be a Remainer, I now realise that we can't dismiss the reasons why people voted for Brexit. The majority are good people wanting Brexit for different reasons. We need to understand them rather than dismiss them.

1.1K 312 2.9K

Bríd @akaSpearBird · 10h
In 4 yrs, I haven't heard a ingle coherent, informed reason for voting to leave. Leavers have robbed young people of so many rights , rights that they have enjoyed and condemned them to yrs of austerity and poverty . So no, I'm still to friggin angry to feel like talking to them

40 67

Paul Gerald Ellis Wesson @PaulGWesson · 10h
I voted Leave on the basis of the House of Lords judgment In Factortame, in order to regain competences transferred to the EU and to lose the acquis communautaire. It's a logical constitutional position to take.

3 1 13

Woody #LUFC @Wood_V3 · 7h
Notice how so many of them say I've never heard a single reason why anyone cited leave, then when you give one they completely ignore it

Open your eyes. It is everywhere. A simple measure would be to look at the dropping £.

1 2

Bernie'sTweets @berniespofforth · 2h
You don't understand this subject. Happily for you it's almost my fave. Exporters have benefited from a lower Sterling for 4 years, as importers did before. Importers have benefited from a fall in the yen against the $. All swing in roundabouts. Large companies hedge against this

5 6

Victoria Smith @smithwax2 · 2h
How will exporters benefit from losing tariff-free trade across EU? Leaving biggest trading bloc/ erecting barriers to trade with nearest neighbours isn't sensible. You say you completely debunked Brexit as a factor for med shortages we encounter but you know will become one.

1 5

Stephen Wood @SlideQuintus · 7h
You speak as if just letting the bodies pile up as a nation attains herd immunity is just one of the lumps we must take in life. And they're not doing that great, economically at least.

1

Fred Wagner @fjwagner713 · 7h
You are missing my point and getting dramatic. Spreading it out or letting the virus be a virus with likely the same end result without all the less tangible fall out.

2 1

Stephen Wood @SlideQuintus · 7h
"Spreading it out" buys you time to develop a vaccine, so that you don't have the same end result as if you merely said "screw it" and opened the economy. And I don't think I was particularly dramatic. We've lost 150K lives.

1

res me @rentawally · 2h
The lockdowns appear to have increased casualties...if you look at the science.

2 1

Lots of likes & retweets but no comments. Perhaps the NHS where you are is in fine form. We know East Kent don't find it so. It's upsetting. It's dangerous. Don't get ill, seriously.

> **Yardley Yeadon** @MichaelYeadon3
> At present, the NHS isn't in crisis, it isn't overloaded, it's not starved of money, it's got staff way more than its patients but, unless you're giving birth, it's pretty much Closed For The Duration. It's in a failed condition. We demand to know why. Retweet if you agree.

2 1 1

Andrew #KBF @AHickinbotham · 5h

My thread on lack of treatment from GPs last week received a lot of attention, hundreds of people backing up what you're saying:

> **Andrew #KBF** @AHickinbotham
> Rang my GP to request an in person appointment. I'm told that the GP has to decide if this is needed (instead of over the phone). Don't believe @MattHancock's lie the NHS is not fully open. Neither could they tell me when they plan for service to return to normal.

There is some confusion here. The right of the individual over the right of the manager to question your claim of an exemption that you are not prepared to evidence? Whilst you have a right not to disclose, you have no right to enter on an exemption claimed but not evidenced.

2

Russell Griffiths @griffiths_rj · 1h
You would be wanting proof a wheelchair user can't walk, or a blind man can't see. Take s good look at yourself in the mirror.

2 1 1

therealPhillipJames @Tony_The_Gator · 1h
The wheelchair is proof I would suggest and the blind person has other evidence of their impediment.

1

Russell Griffiths @griffiths_rj · 1h
As an asthma sufferer what "proof" would satisfy you? A bell round my neck? A yellow star stitched to my jacket? You are way off the reservation.

A high transmission rate between people who are not made seriously ill by this virus is highly desirable.
I do not believe you've any idea what you're doing. I have zero faith in anything you say or 'measures' you introduce. You are rapidly losing the confidence of the people.

Exactly. Whatever is being measured, it's not viable, intact, infectious SARS-CoV-2, or it is being measured in people who are simply not susceptible to being made ill by it. Experienced epidemiologists consider this a very good thing, as it erodes the % population susceptible.

This is Sweden, no lockdown. Surely the virus continues to blaze through the country, killing indiscriminately? Oh wait.
In terms of daily covid19 deaths, most recent data has Sweden 37th in the world, 12th in Europe.
How can this be? Spoiler: the most knowledgeable...

> **Freddie.sonson** @SonsonFreddie
> I'll be the first to admit I've been wrong
>
> This is stats about corona and how Sweden now is doing better and the numbers are going.. Fast.

1 2 5

Yardley Yeadon @MichaelYeadon3 · Jul 29

... epidemiologists think a major component is herd immunity.
As Tegnell himself says, growing population immunity & reducing % population remaining susceptible are most likely responsible as nothing else has changed.

No one would argue with putting in place local action to reduce the transmission of coronavirus.

But announcing measures affecting potentially millions of people late at night on Twitter is a new low for the government's communications during this crisis.

Actually I would argue it, there are increases in cases because testing has increased, deaths haven't! So logic would say it's no worse than it was, just that it's being "tested" for, and it tests for a number of coronaviruses including the common cold. I'm affected by this news!

3 1 16

Áine FitzGerald @ainefitz77 · 8m
Deaths tend to follow up to three weeks after a rise in detected infections rates sadly

2 3

Yardley Yeadon
@MichaelYeadon3

Replying to @ainefitz77 @diddyrachael @Keir_Starmer

Govt has presented no evidence that there are more cases.
Measuring & finding more cases does not constitute evidence.
Evidence would need to include a higher positive rate, regardless of numbers of tests.
They've not claimed this. Since it would be a killer claim, it's not true.

An equally important corollary is that, as it wasn't lockdown which led to rapid falls in transmission, something else did. The only plausible explanation is emerging herd immunity, also predicted by leading epidemiologists (not on SAGE).

Btw, this vaccine has never been tried before.

The Bill Gates company Moderna which resides next door to Chatham House in London is developing it.

For those that don't know, Chatham House is the NWO.

I wouldn't be surprised if both buildings were one.

Do face masks work in stopping Covid-19?

Please RT for wider views

36 78 30

Bo Gritz (no, not THAT Bo Gritz) @bogritz · Jul 29

Holy Mother of God! No wonder this plague just continues to burn through our population completely unabated! NOBODY IS WEARING A MASK! Because "masks dont work" AND we call ourselves the enlightened ones??

3 3

Yardley Yeadon @MichaelYeadon3 · Jul 29

In the only large scale, randomised trial of infection by respiratory viruses, masks were clearly shown not to work. Feel free to believe whatever you want. It's the fashion these days, where ignorance is strength.

3 3

twikz #BLM @twikz · Jul 29

Please show your sources because there is plenty of proof that wearing a mask drastically decreases your chances of getting the virus. If youre so smart calling people who wear masks ignorant id like to see where you get your information from.

plough0 @plough01 · 5h
I think they're probably a bit reticent to mention herd immunity again (that I think we both knew would be the way out of this) after the public and MSM pile on when Dr Vallance mentioned it at the very start and the MSM claimed it was their strategy & that they'd let people die

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @plough01

They could rephrase it by remarking that the % population susceptible appears to have fallen faster & to a greater extent than anyone believed possible. And be the first to burst a bubble. I'm surprised not one science correspondent has offered a different view.

Well if you go to check the statistics you will see what I'm talking about. It's slow but it is rising recently. It was 100 cases or so about three or four weeks ago and now 800 to 1000. I'm not saying protest is bad but now it's just not the appropriate time to do it.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @lyricssen @MailOnline

No. What we're seeing is higher numbers of positive test arising purely from very much elevated numbers of tests.
Try as you might, you won't find the comparable stats from, say, 3mo & now, where they show positives as % of tests.
That's because they're lower now.

Do they realise this will make things even worse?

1

Rob Johnson-Taylor DSc @GreyTash · 44m
Quite the opposite, COVID19 may be very infective but over 90% of those who've had have had no symptoms, and suffer no ill effects. The CDC put the mortality rate between 0.26% and 0.4%. The vast majority are held to ransome by the panic of politicians.

1 1

Yardley Yeadon
@MichaelYeadon3

exceptions being maternity & neonatal services.

2

Poppy love @Love1Poppy · 20h
The only thing that isn't happening are minor appointments that are not life threatening. Other than that, the NHS is still open for business.

1

Yardley Yeadon @MichaelYeadon3 · 5h
Perhaps, where you are. Not where I am, in East Kent. Nor where my sister is, in central Hants. I have friends in N Lincs reporting similar things to mine. So, respectfully, you can't speak for more than your own experience & that certainly doesn't make my experience incorrect.

1

Poppy love @Love1Poppy · 2h
Well I sort of can! My husband's nephew is a cardiologist and he said that his department is working as normal and he works in Dorset. He said that the doctors and hospitals are open a lot more now.

Do they not understand that behaving like this could make everyone live with these measures for longer

3

Yardley Yeadon @MichaelYeadon3 · 3h
Au contraire. Even if they're wrong (they're not) the more quickly the remaining fraction of the population still susceptible falls, the faster there will be no further outbreaks.

1

Molly @Molly40716782 · 3h
Let's hope none of your family get it then eh, perhaps you might change your mind if a loved one died.

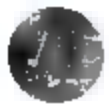
lyricss @lyricssen · 6h
Totally out of their minds as the newly infected cases in Germany have been rising for days. And they rather gathering without any distance than staying safe at home!

3 2



Yardley Yeadon @MichaelYeadon3 · 5h
NOT true. If you're correct, admissions will soon be up, deaths up shortly thereafter. Hasn't happened weeks after prior demos. Likewise in U.K., no reaction to crowded beaches, BLM demos etc. There's a good reason why this is so.

1 4

lyricss @lyricssen · 5h
Well if you go to check the statistics you will see what I'm talking about. It's slow but it is rising recently. It was 100 cases or so about three or four weeks ago and now 800 to 1000. I'm not saying protest is bad but now it's just not the appropriate time to do it.

3

Yardley Yeadon
@MichaelYeadon3

A key piece of information you're missing is how many tests were performed in order that the larger number of positives disclosed were obtained (I'm talking about towns on which new restrictions have been applied). I recognise that the ONS survey is showing a slight uptick.

Potty scientist who is head of Sage's useless subgroup on pandemic modelling says that pubs may have to close to allow schools to open. I don't see the connection. Just hope the government doesn't either.

49 97 312

Ljubica1 @Ljubica1 · 9h

The connection's simple. The infection rate's still rising. Schools mean more people around (dropping off at School gates, teachers working etc), so they have to find some way of stopping gatherings elsewhere to create a balance. And kids' education way more important than pubs.

4 1 6

Yardley Yeadon
@MichaelYeadon3

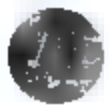
People understand this is a means to an end to eradicate the virus here. That you fail at weighting and choosing the better of these two difficult decisions is because of your ideological priors.

2 2

ben shiels @ben_shiels · 34m
If the plan is to eradicate the virus, then surely the process will eradicate all contagious diseases. Do you honestly believe that will happen? Talk of eradication is subtle moving the goal posts, and I think society has been gently coerced away from "flatten the curve".



1 5

Prometheus @PrometheusAM · 27m
You understand you can change objectives under uncertainty, as more information comes in, right? Western Australia has eradicated community transmission. So has New Zealand.

Temporary pain & a return to normality locally is a superior trade-off here, versus an ongoing epidemic

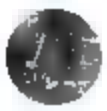
and the youth are more likely to die from lightning strikes were they even to get it.

3 2 15

Peter Angell @pete_angell · 42m
Of course it's still a pandemic! 650k dead worldwide and rising. Whilst young people can of course get it and can have long-term effects (although much less risk), you're completely overlooking all those who work in academia. Younger adults still spread it!

3

Keith @LonsdaleKeith · 11m
A pandemic is a cross border epidemic.
The definition of an epidemic is an instantaneous infection level of >=0.2%.



The current UK estimate is <0.07%, three times lower than the qualifying level and that number is likely to be an over-estimate by a factor of at least 2.

3 1

Stuart Wilson @Stuart_Wilson19 · 10m
IS the virus any less infectious now or deadly than it was 5 months ago?

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Stuart_Wilson19 @LonsdaleKeith and 6 others

No. The major difference now vs previously is the greatly reduced fraction of the population who are susceptible to infection, illness & death. This is the whole explanation for the steady fall in hospitalisations, ICU occupancy & death rate. All moving one way only.

It's not viable even mid term to seek to eradicate a highly infectious agent like this virus. The efforts expended in seeking such an objective are disproportionate to any gains. I'm not talking of money. Even NZ will find it all but impossible to keep the virus out indefinitely.

2 3

Yardley Yeadon @MichaelYeadon3 · 56m
A vaccine won't eradicate the virus, either. That objective has been achieved only once or twice in human history, stun smallpox. There, the effort was warranted because almost everyone was susceptible. Few people will even show the slightest symptoms with the virus. Rightly...

2 1

@Paul @RealPaulJW · 21m
Flu deaths in UK remain consistent despite mass vaccinations, but big pharma makes a mint from producing them.

I've never reviewed the time course of flu deaths over the years, but I do wonder what is the evidence for your contention? If flu vaccine is deployed yearly, you'd expect a similar flu death rate each year, surely? It shouldn't rise or fall. It's deaths in presence of vaccine.

Did you miss the part where we are in the middle of a pandemic whose spread is facilitated by prolonged face to face gatherings?

7 50

Francis Hoar @Francis_Hoar · 56m
Not even been an epidemic since May. Hospital deaths tell the true story (below) and the youth are more likely to die from lightning strikes were they even to get it.

3 2 15

Stuart Wilson @Stuart_Wilson19 · 49m
So? This is basically the same virus as March. If we open up society again it WILL spread. Yes we have a better understanding now and we have some treatments that will reduce the numbers going into ICU, ventilation and dying but we have no way, apart from social distancing and

2

Yardley Yeadon
@MichaelYeadon3
Follow

Replying to @Stuart_Wilson19 @Francis_Hoar and 4 others

We have already opened up & it has not spread. The reason is the same one why daily deaths fell for the last 13 weeks. I find it touching that you appear to believe human agency is the reason for the perfect decline (identical to that in many countries - no coincidence).

My tweet is still true, isn't it? Deaths are NOT rising anywhere. The so-called cases are predominantly younger & not even made ill by it. This remains a good thing. Each non-illness encounter with the virus creates another immunological firebreak.

> **Yardley Yeadon** @MichaelYeadon3
> This is a good thing. You'll notice the authorities aren't telling you about high death rates. That's because they don't have high death rates. The virus is running through the highly social younger cohorts. They're not ill; now they're immune & are 'fire breaks'. A good thing. twitter.com/27476b54549e46…

If the plan is to eradicate the virus, then surely the process will eradicate all contagious diseases. Do you honestly believe that will happen? Talk of eradication is subtle moving the goal posts, and I think society has been gently coerced away from "flatten the curve".

1 1 21

Prometheus @PrometheusAM · 4h
You understand you can change objectives under uncertainty, as more information comes in, right? Western Australia has eradicated community transmission. So has New Zealand.

Temporary pain & a return to normality locally is a superior trade-off here, versus an ongoing epidemic

6 1

Yardley Yeadon @MichaelYeadon3 · 3h

We also have to consider the fact that it's been in Europe for at least 10 months so, was it ever extraordinarily infectious? If so, where did it hide between October & January?

2 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @LonsdaleKeith @Stuart_Wilson19 and 6 others

I don't think we need to posit any hiding. Envisage the first case in Europe. Maybe they felt ill & stayed home for a week, infecting no one? Or infected two people, one of whom shrugged it & never transmitted it. In brief, it remained at low levels until Jan, then rapidly rose.

however this is Charlie Mullins, one of many employers in this country who tries to game the system by hiring people on a "self-employed" basis. But yeah go off on "lazy" employees but not greedy employers

2 1

Dirty Harry @dirtyharrySF · 39m

How can he furlough people on a self employed basis? You can't. Facts help.

1 1

Pagancat @pagantc · 37m

"Facts help." So does reading dipshit.

> In 2018, Mullins lost a landmark Supreme Court workers' right case against a self-employed gas engineer.
>
> Gary Smith, who worked for Mullins' business for nearly six years until he had a heart attack, should have been treated as an employee, judges have ruled.
>
> Mr Smith, who joined in 2005 but fell ill in 2011, should have been given paid holiday and sick pay as well as other perks including rest breaks despite being classed as self-employed.
>
> He successfully claimed he was a staff worker because he was required to use the firm's van for assignments and contractually obliged to do a minimum number of hours a week.
>
> Mullins said the ruling was 'disgraceful' and would lead to a 'tsunami of new claims' in Britain and accused judges of 'bottling' the chance to 'rectify' our out-of-date employment laws. He said: 'It was a terrible decision'.

The number of folk who think that all teachers were doing during lockdown is teaching 20% of the class, and not having to plan and distribute online resources on top of their classroom work, is genuinely astounding

Comes from years of the Tory press bashing our public servants

> **Yardley Yeadon** @MichaelYeadon3
> Replying to @iamleonmallett @BricktopWilbury and 2 others
> There have been around 20% of the pupil role at most in our village primary. It's increased in recent weeks but for months, I could see & hear almost nothing from the school, which is 50m away.

Testing data shows continually falling rates of infection. The authorities are pretending that more tests = more cases = increasing rates of infection. It's simply not true.
They're seeing LOWER rates of infection but testing more people. I'm astonished no journo picks this up.

Melanie #KBF @MDJO
Replying to @MichaelYeadon3

The cases are declining when compared to the number of tests. The gov/media are just quoting absolute figures to justify lockdowns.

And no one asks for clarification.
Why?
None of this is by accident.
At first I thought it was incompetence.
Unfortunately it's all following a script. Even miss/disinformation was penned years ago.
Never in wildest dreams did I think I wld text that sentence but too coincidental

4 9 42

Yardley Yeadon @MichaelYeadon3 · 3h
I'm trying my best to believe "this is all cock-up, not conspiracy". I don't believe in alien lizards, the Illuminati or concerns about 5G. But the coordination across continents of daft reactions to a middling lethality virus which has all but gone thro' whole pop makes it tough

4 1 3

No2NWO @albatroneburb · 17m
What's the chance of "independent" leaders of governments all suddenly making the same decisions at the same times?
What are the odds of media throughout different countries all using the same new phrases at the same times?
And all of this coming right after event 201?

1 1

I'm struggling to see even the faintest signs of Russian interference. Surely there must be an a priori case even to consider commencing an investigation? In its absence, it's laughable to accuse Govt as their opponents have. They didn't check for Chinese interference, either.

Y'all seriously need to take a class or something.

No one is trying to define YOUR gender identity.

It's not our place to tell others that they are not the gender they identify as. Nor is ethical to defined which gender identifies get which types of healthcare/services.

5 1

Debbie @debbiesuth27 · Aug 1
You said it wasn't cis, I don't like that term, ppl's place. I asked you if that meant you felt it was trans ppl's place, that's all, no classes necessary

2

Sava @UnicornTickles · Aug 1
Cis ppl are the only ones trying to define what women are and are not.

Cis can be problems because it inherently implies a default body-gender configuration but it's the only word we have for ppl that haven't had any real conflicts with their own gender identity and prsntation.

3 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @UnicornTickles @debbiesuth27 @AyoCaesar

No, it isn't. You've decided that. No, the word used in the circs you've just defined is 'woman' or 'man'. It's superfluous to add cis, a word that has no meaning to most people who've not studied classics.

Exactly. My wife is a woman. She belongs, in this respect, to a well understood category. If a trans person now identifying as a woman is included in that category, you do affect both my wife & me. It's not at all neutral. Please, pick another word, like transwoman, is accurate.

Mate, you don't need to "control the virus". It's already finished in London. If you had a clue about immunology (why would you) you'd understand that there is nothing you or anyone needs to do. Except do your job, whatever the f that is.

The 90min test could be problematic. If misused it will extend this farce until at least March 2021. It reads positive not only to SARS-CoV-2, but to both influenza viruses & to RSV.
In people who are well, their presence is medically unremarkable & should trigger no PH response.

Do you tweet everyone who uses an image that's not their own?

If you accept that I can do what I want, why did you feel it necessary to mention it initially?

Anyway, I'll continue using it and risk being mistaken for Bowie's doppelganger.

1

Yardley Yeadon @MichaelYeadon3 · 3h
No, I don't. But the only image I reacted to is Mr Bowie's. I've been an over invested fan for longer than is sensible :)
Ignore me, please. Have a nice evening.

Why is #COVID19 being tested along side with #flu ?

3 7

Joe C @Joe_C_London · 14h
So that, if someone develops symptoms, we can quickly work out which it is?

Is this a trick question?

1

tubs @tubs76983200 · 4h
They are both a positive result

1

Joe C @Joe_C_London · 4h
Yes. For different things.

You see, the test can tell the difference between the two, and tell you which one it is. It's actually quite clever.

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @Joe_C_London @tubs76983200 and 3 others

It could do that, if it was set up that way, but it isn't. The primers employed will return just a positive or a negative for 'respiratory viruses'.

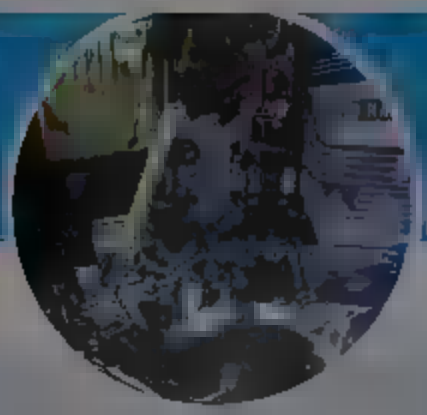
Also, why are they so concerned about getting everyone's DNA? Used to be only "criminals" on a national database, now the aim seems to be most of society.

1 1 3

Yardley Yeadon
@MichaelYeadon3

Follow



Replying to @ReptilianRetic @Shaunreed6Shaun and 2 others

No, it doesn't do that. If you review the technique, it commences with a reverse transcription step, changing viral RNA to cDNA, then that is amplified. No human DNA is assayed, except that for actin, a human intracellular marker.

Agreed. But from now on, by that rationale, we should be compelled to wear effective respirators, not cloth masks, to prevent transmission of numerous organisms, any of which can kill someone, even rarely. Flu & RSV certainly do. Masks are poor, more than rarely permitting leaks.

3:56 PM - 3 Aug 2020

1

john @jostanbo123 · 16m
Replying to @MichaelYeadon3 @godmorningmm and 2 others
That would be an ideal world, but if anyone should have effective respirators then it should be NHS and frontline workers dealing with patients daily. Also, I agree paper masks are flimsy and don't stop much but thicker fabric masks are more effective, and reusable too.

Just a question cause I'm not sure what dna has to do with a virus, I might be a slow so apologies if I'm not clued up

1

Yardley Yeadon

@MichaelYeadon3

Follow

Replying to @laurawh @BBCPolitics

You're right, many viruses use RNA. But they start this test by transcribing the viral RNA into complimentary DNA. That's then what is measured. Look up reverse transcriptase in wiki.

No. It's DEFINITELY not true that R0 is exceeding 1 in UK.
We've been warned about this nearly continuously.
We can easily show it's untrue, because the rate of covid19 hospitalisation, ICU usage & deaths falls relentlessly, now for 14weeks with no reversions.

Europe's ability to avoid a new spiral of infections and lockdowns depends on testing and tracing.

Much has improved in this department: France, Spain and Italy are testing so widely that only an estimated 1% of tests return a positive result

The people attending don't get ill when they acquire this virus & they're also poor transmitters. However, each person who's encountered the virus & survives is now highly resistant to reinfection, thus creating an immunological 'firebreak'. Plus, they enjoy it & aid the economy.

There at least 170 separate families of known virus, and 105 distinct subfamilies below this. Certainly there are many hundreds of different viruses. By no means all can infect humans but many do, causing diseases as minor as common colds to as lethal as Ebola.
Why sceptical?

I'm sorry the replies assumed ill-intent on your part.
If I read correctly you said "this young dad is just great. It's a shame that it's not, as we'd all want, commonplace to be this insightful & to really take responsibility. For that he is & is taking about it, major kudos"?

I worried the hell about this myself. Broken family & not much love. I doubted if I could even have a shot at being a good dad, especially if I'd have been blessed with a son. Nothing to model myself on. 2 daughters & 1 grandson later, it's still humbling & a learning experience.

The Female Brain and The Male Brain are books written by the American neuropsychiatrist Dr. Louann Brizendine. The main thesis of the books is that female and male behavior changes over time with surges and drops in estrogen and testosterone hormone levels.

Sometimes, mortgages are covered. In the 1980s, before marriage, my wife & I took out endowment mortgages (we'd no idea, but many did, so...). Years later we realised these policies were completely unsuited to our risk stance. 2y back & forth & the regulator fixed it. Whew.

NO MORE ILLEGALS

(RT this we need a massive protest)

31 867 921

Don Dino Leon @burybunny · 21h
I suggest you have a word with the French police And FYI Dover begins 7 miles offshore Good Luck Don't you wish you voted Remain

5 1

Yardley Yeadon @MichaelYeadon3 · 11h
Stopping illegal migration is neither a competency or political interest of the EU. Membership or not, this continues. So, no. Why would I?

1 2 5

Don Dino Leon @burybunny · 10h
The EU want to stop it None of its member States want it They simply can't physically stop it short of sinking boats before they enter EU waters And the UN has no interest in forcibly stopping boats being launched from its member States

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @burybunny @SteveLaws19 @84Liam

I don't doubt what you say at all. It reinforces my belief that it's not a competency (that is, they don't set policy & assign resources to ensure targets are met). Thus it's immaterial whether a state that a migrant crosses is in or out of the EU. That's all I meant.

Yardley Yeadon
@MichaelYeadon3

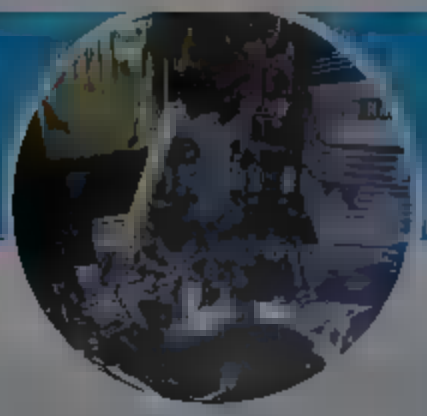
Follow



Replying to @love_kitkat @eales_p @BBCPolitics

I read the technical description yesterday. The initial step is reverse transcription to convert viral RNA to cDNA, and it's the converted DNA which is then 'isothermally' amplified. Usual PCR uses heating & cooling cycles.

The responses to this not very remarkable virus amount to the most damaging public health policy ever devised. I don't think it's exaggeration to suggest tens of thousands of lives have been lost to non-covid19 causes.

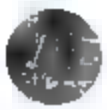
Gordon Riches #FBPE @gordon_riches · 6h
Depressing to read the misogynistic comments here. Guess we do get the government we deserve when so many can be bothered to rip into an MP who seems at the very least, not to be f*cking the country up. Guess for some, twisted logic would still blame Labour's defeat on her.

34 1 70



Susan Cochrane @Mummasuzz · 2h
Oh stop it, pointing out her duplicity and self obsession is simply stating the facts.

1 2

Gordon Riches #FBPE @gordon_riches · 1h
A pie chart might have been less personal? Non Labour members but Labour voters have been pointing out that Labour seems happier to rip into its own than the Tories. It is so depressing & counterproductive. If Labour has any chance of government it must unify & be less nasty.

Replying to @carolecadwalla

No, it isn't. At peak, around 400,000 new people were getting infected daily.
We are seeing fractions of 1% of peak. Ditto deaths, down from way over 1000 to around 10 to midteens per day. All stacks up with ICU utilisation. It's fading & no reversions of any magnitude anywhere.

Stopping illegal migration is neither a competency or political interest of the EU. Membership or not, this continues. So, no. Why would I?

1 2 6

Don Dino Leon @burybunny · 17h
The EU want to stop it None of its member States want it They simply can't physically stop it short of sinking boats before they enter EU waters And the UN has no interest in forcibly stopping boats being launched from its member States

2 1

Neil Maclaren @NeilMaclaren1 · 53m
The EU could quite easily have stopped them from crossing several land borders before even reaching France.

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @NeilMaclaren1 @burybunny and 2 others

Maybe. But I don't know with what authority & treaty the EU themselves would be doing any such thing.
Also, there isn't an EU security apparatus, no EU border or police force.
So I'm not persuaded the EU could do what you say.
Ready to learn, here.

That's strange. I thought we were told that the virus could only exist outside the body for a maximum of 72 hours. Can't they simply leave the building unoccupied during this period?

Honestly folks. No one in their right minds would bulldoze a building if the concern was microbiological contamination, for the obvious reason that this is the best way of spreading it!
Surely this is a spoof? No circs where demolition is a good way of managing infection.

Prof Ferguson has just stated on BBCR4's main news program that, if all the schools open fully, the R number will rise from around 0.2 to around 0.5. Ok, a test. Who's been listening? What does an R below 1 signify? Yes: a pandemic in retreat. 0.2 is "ebbing away REALLY quickly".

Even an R of 0.5 means "infections & all downstream effects are falling away steadily".
So, we can conclude that Ferguson knows full well, as i & others have said for weeks, that DESPITE the reopenings everywhere, the big picture is of an ending, a fading away of infections.

liz coombes @lacoombes · 2m

Exactly. And just as there's a big difference between say 1.1 & 1.3, there's a huge difference between 0.9 & 0.2, where it is now. That means on average only one person in five with virus infects just one other person. In a few more such cycles, it'll be undetectable.

Replying to @karenishly

It's a good point. It's not possible to measure it in real time because there are now far too few events to put into the model. They can estimate what it was PREVIOUSLY based on the FALL in numbers in hospital, ICU or deaths from covid19. We who watch the daily data know R<<<0.5.

Noooo. Please, don't comment on matters you clearly don't understand at all. The reason the cases are all young is because the authorities are mass testing this cohort. They're doing that because they're not seeing older, ill cases. They can only track its fade-out this way.

I think you'll find the demographic is young because it's the No. 1 dispersal city for new migrants without a family destination. The young will have had it, not died, then formed a human firebreak. That's how all infectious disease pandemics end.

I am optimistic that we'll find a much lesser need for this specific vaccine than anyone thought. I mean this sincerely. There's already not a massed need for it as most people don't even get symptoms. The elderly and/or ill will be delighted to get a vaccine.

We know estimates of infection fatality ratios vary but many accept around 0.25%. This means each death was preceded by 400 infections. Our 47k deaths implies almost 19million infections. 30% of 67million is 20million. So roughly 39million are no longer susceptible. That's 58%.

We're told that the herd immunity threshold is v high, like 80%, but all the modelling suggests it's between 25% & 35%. We're hugely above that, which is why the key data are ALL pointing downwards. There's been no reversion to trend for 14weeks. It's over.

The NHS is set up for Wave #2, which isn't coming. The effect is half the cancer patients aren't even getting rapid screening & treatment. Thousands have died avoidable non covid19 deaths. Thus I'm quite angry. Someone has made the cool political calculus that it suits them.

They think she's a flight risk. Yes, that's possible. But they can tag her to satellite tracking & take her passports. I don't think house arrest is fair, either. She's not a threat & until convicted she's innocent.

2

Ms Sparrow @sonnetseven · 23m
How do you know she is not a threat?

1

Yardley Yeadon @MichaelYeadon3 · 16m
In the sense that she is not alleged to have shot or stabbed anyone. Her weapon was persuasion. I'm asserting that she is an unlikely threat to the general public. I could be quite wrong, but that's what I meant. Usually, the judge decides after arguments are put.

1

Ms Sparrow @sonnetseven · 6m
The judge did decide she should be held in prison, after considering the argument from both sides. The very wealthy & those with resources at their disposal seldom get their hands dirty. They can pose a threat to individuals, not just the general public, not accusing, just saying

Ok, you're correct. I don't disagree that this is a decision for the judiciary & they'll not have decided this lightly. If it was wildly in error, counsel for GM would have sought review, and as far as we know, they've not.

Prof Ferguson has just stated on BBCR4's main news program that, if all the schools open fully, the R number will rise from around 0.2 to around 0.5. Ok, a test. Who's been listening? What does an R below 1 signify? Yes: a pandemic in retreat. 0.2 is "ebbing away REALLY quickly".

5 4 8

Anne M #KBF @meganne121 · 38m

However much cases are falling, hospitalisations have plummeted and daily UK deaths are in single figures.
If we can't get back to normal now, we're left with no option but to conclude that it's not about the virus. It's about destroying us.

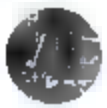
that's why in May, German immunologists started...

1

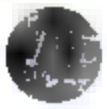


Yardley Yeadon @MichaelYeadon3 · 17m
...testing for T-cell reactivity to the virus. They find 30% of pop do, prior to virus, rising to 90% afterwards. This is overlapping immunity to such as SARS-1, lasted at least 17years. This study has been confirmed & extended in 2 other countries from 'Oxbridge' quality labs.

2

Jill Collier @JillCollier16 · 11m
That big picture is very important, but do you really need to be so dismissive of individuals who are concerned for their ageing relatives being cared for by younger people who are risking catching the virus? I understand in the long term it will be safer for all of us.

1



Yardley Yeadon @MichaelYeadon3 · 9m
I'm very concerned about it. Though I don't feel vulnerable I am by virtue of being >60 and carrying an invisible disability that might hamper being able to bear illness. But we are being over cautious given the current risk & more are dying from consequences than virus.

2

Jill Collier @JillCollier16 · 7m
I understand. At least my commenting gave you a chance to explain, no?

Indeed. A case is formed merely by finding a positive test. We know the prevalence is falling steadily. So for more cases, the authorities must be testing very many more people. There actually isn't more disease. There's less. It's important you understand that.

Important distinction. Did you know that your lovely govt is simply testing very many more people than before and not disclosing that fact? We know this because the % positive continues to fall. The so-called spikes are manufactured by testing hundreds or thousands in one place.

It's shocking that govt deliberately hides the denominator in testing such they can flatly lie in your faces & tell your there's a spike here & there. I don't believe them. Also, they're running so many tests that false positives outweigh genuine hits by 5:1. Nonsense science.

Professor Karol Sikora

@ProfKarolSikora

Some important context. In July there were over 1 million more tests to see if someone had the virus than conducted in June.

To be honest, it would be a little surprising if we didn't find more cases.

Govt should publish number of people

Thank you John. It's vital that we point out the lies Govt is telling. I can't divide a motive, but they definitely are lying. This isn't zeal & error. A school child could spot the mistakes. It's actually insulting.

Please read what Prof Ferguson said earlier. Don't believe spike lies.
Also note recently Prof Whitty conceded to a Parliamentary Cmte that infections had begun to fall BEFORE lockdown, which by definition means this hugely destructive intervention was probably not required.

> **Yardley Yeadon** @MichaelYeadon3
> Prof Ferguson has just stated on BBCR4's main news program that, if all the schools open fully, the R number will rise from around 0.2 to around 0.5. Ok, a test. Who's been listening? What does an R below 1 signify? Yes: a pandemic in retreat. 0.2 is "ebbing away REALLY quickly".

Yardley Yeadon @MichaelYeadon3 · 9h

It's not 20% who get ill or hospitalised & I can prove it. At its peak in U.K. around 1200 people per day died of or with covid19. As the infection fatality rate is around 0.25%, that means nearly 500,000 people were getting infected every day! 20% would mean 100,000 hospital...

Huge implications. When we hear 'confirmed covid19 case', we think of someone if not ill then at least infectious. It looks like very many are neither.
This is made catastrophically worse when over testing is done, like now in uk.
False positives outweigh real infections 5:1.

My husband has just been in the local chemist. A distressed gentleman came in saying he needed help. He has PTSD, anxiety & depression.He said he's a prisoner in his own home.He asked the pharmacist to help him as he feels the only way out is to end his life.This has got to stop

23 116 301

warren @warren00761692 · 5h

Lost good friends to suicide; Each week in our local community people go missing only for their body to be found washed up sometime later. There have been three in the last two weeks (reported). We've had TWO supposed death from Covid here. Gov don't care about that death rate.

1 1 16

Laura @ReeeeSpectWalk · 4h

2 local suicides here. Both had many issues but the guy 'couldn't get his medication' and the young mum needed an emergency mental health appt but 'they are struggling to get me one because of COVID limitations' she said that a week before ending it

My mum killer herself when I wax 18mo old, the youngest of three. Just awful when I think of my poor mum, a bright & lovely lady, so my uncle told me. He's still sad & angry, 58 1/2 years later.

Tale of two cities Stockholm vs Birmingham. Similar pop density, Stockholm has subway Birmingham doesn't. Despite less gov restriction, higher mobility, Stockholm age standardised mortality < Birmingham. Data fails to reject hypothesis that full lockdown has no benefit. #COVID19pic.twitter.com/fevOkaKetn

Patients with covid19 had virus cultured from their airways, grew in & injured cells in culture, virus was sequenced & shown to be identical to the original Wuhan strain. Finally the obtained sone electron micrographs, showing the characteristic corona.

I disagree. All four have been satisfied provided you can accept as proxy the clinical infection from a case to another person, coupled with showing that full length virus is cultured from a covid19 patient. We also know that as time passes, viral load falls & patient recovers.

No it hasn't.....a purified C19 specimen has NEVER been viewed under an electron microscope...what you saying is patently false...NO TEST currently in use can diagnostically conclude that anyone in the world carries a novel CV...

And that's why we asked Dr Calisher whether he knows one single paper in which SARS-CoV-2 has been isolated and finally really purified. His answer:

> I know of no such a publication. I have kept an eye out for one."[4]

This actually means that one cannot conclude that the RNA gene sequences, which the scientists took from the tissue samples prepared in the mentioned in vitro trials and for which the PCR tests are today being "calibrated," belong to a specific virus — in this case SARS-CoV-2.

In addition, there is no scientific proof that those RNA sequences are the causative agent of what is called COVID-19.

cause the PCR tests are calibrated for gene sequences (NA sequences because SARS-CoV-2 is believed to be a R we have to know that these gene snippets are part of th -for virus. And to know that, correct isolation and purit presumed virus has to be executed.

we have asked the science teams of the relevant papers erred to in the context of SARS-CoV-2 for proof whether n-microscopic shots depicted in their in vitro experime urified viruses.

t a single team could answer that question with "yes" — body said purification was not a necessary step. We or 's like *"No, we did not obtain an electron micrograph showing t ention"* (see below).

The quotes are outdated for I've seen very many which involved FL (full length) sequencing. This isn't technically as difficult as it once was. The technique is central to "forensic virology", where small differences & identities inform where its nearest neighbours was seen.

Most diagnostic tests balance expediency with perfection. In culturing a bacterium clinically, we don't try to get Nature-quality proof each time. But if it's an obligate anaerobe which grows well only on McConkeys agar, is killed by antibiotic X but not Y, we say it's Bug Z.

Just out of curiousity, what is ammonium nitrate, and why would anyone need 300 tons of it?

122 26 99

Ian @eg_ie_me · 2h
I remember as a kid we had maybe 50 tons on our small farm. Also as a kid I remember trying all sorts of tests with friends to blow small amounts up. Even when smothered with a deodorant flame thrower it wouldn't ignite.

4 3

Dave... @Genghis65080321 · 2h
you should add a carbon based fuel for small amounts.. sugar works well .. the nitrate creates oxygen and increases the rate of combustion.

think about rocket fuel...

It's a DOG virus. I doubt that variety can even infect a human or raise an immune response in humans which would protect against SARS-COV-2.

300 tons of it?

141 30 114

Ian @eg_ie_me · 3h
I remember as a kid we had maybe 50 tons on our small farm. Also as a kid I remember trying all sorts of tests with friends to blow small amounts up. Even when smothered with a deodorant flame thrower it wouldn't ignite.

4 3

Dave... @Genghis65080321 · 3h
you should add a carbon based fuel for small amounts.. sugar works well .. the nitrate creates oxygen and increases the rate of combustion.

think about rocket fuel...

2 2

Yardley Yeadon @MichaelYeadon3 · 59m
Yes, isn't that the phosphate component? HPO4 or similar, so a great deal of oxidant.

1 1

Dave... @Genghis65080321 · 44m
the nitrate and nitrite, forgive me its a while since I did A level chemistry so I could get mixed up, create oxygen, if heated. this supports combustion and explosions if the mixture allows.

Defund The BBC @DefundBBC · 3h
Silver Voices aim is to get the government to keep funding TV licences for the over 75s, despite the fact the BBC won the right to charge for BBC iPlayer and increase the licence fee with inflation, in return for agreeing to fund them.

24 133 430

Defund The BBC @DefundBBC · 3h
We don't believe the BBC should get more taxpayers' money. We believe pensioners should be free to watch any live TV (excluding BBC) because it's already funded through advertising.

The BBC doesn't need more money. It needs to streamline ready for the open market.

The journalists who run the BBC have in recent years destroyed its reputation for truth & editorial independence. Now, my reaction to anything they say is to ask what today's motive is for the lying & careful selection of subjects not to tell us about.
The damage is irreparable.

Care to provide some evidence for that? For example, that the Windsors personally generate income.

1 2

Ray @ChelseaBronco · 5h
Only thousands upon thousands outside Buckingham Palace all the time. Spending there money in this country.It's called Tourism.Anyone can and do have Presidents, they're two a penny, and who wants to meet them.

1

The spirit of Diderot @UK_Republic · 5h
Ever heard of Versailles? When we ditch the Windsors, the tourists will still come for the history and the buildings. The only 'tourist' who ever visited the UK to see a 'royal' was Virginia Guiffre (née Roberts).

2

Ray @ChelseaBronco · 4h
Sorry to explain, the reason I'm laughing is because you used a Palace built for a French King to justify your argument. 🤦🤦🤦🤦

Evan Davies PM show is awash with covid-mongering. He's better than this. We're told the virus has returned to Aberdeen. It's nonsense. All the 'cases' are young & not ill because PH has gone round mass testing people. It's not a 'spike' because there's no comparable data earlier

1 2 1

liz coombes @lacoombes · 7m

Prof Karol Sikora was on talk radio earlier today. He thinks the media is over hyping this
Sadly some people are still terrified!

It's extremely unlikely. The prevalence of virus is now so low, & continuing to fall rapidly, that the chance of being in the same shop on same day with a 'case' is remote. That you might get infected is almost impossible in a brief visit & masks in any case make no difference.

sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 4
The RS4 isa family car? Really? A performance engine, sports seats, etc etc. How does this make it a family car please?

10 1 7

[redacted]Jon Fisher @jonthepon · Aug 4
Other than engine, suspension and interior trim it's effectively the same as the Audi A4 estate, one of the most practical family cars on the market. This is unquestionably a family car, just a pricey one.

1 3

sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 5
It uses an existing body shell but the low profiles, engine, seats, decor make it highly impractical to run as a family car. Do you have one? Do you have kids?

3

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @mnogogotin @jonthepon @AudiOfficial

I own an Audi S3 & for me, that particular model fails as a family car solely because it's a 3-door. The lowered suspension, 300bhp motor etc in no way disqualify it, and the RS4 likewise. The latter has easy access & good load space. The main thing against it for most families..

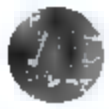
sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 4
The RS4 isa family car? Really? A performance engine, sports seats, etc etc. How does this make it a family car please?

10 1 7

[redacted]Jon Fisher @jonthepon · Aug 4
Other than engine, suspension and interior trim it's effectively the same as the Audi A4 estate, one of the most practical family cars on the market. This is unquestionably a family car, just a pricey one.

1 3



sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 5
It uses an existing body shell but the low profiles, engine, seats, decor make it highly impractical to run as a family car. Do you have one? Do you have kids?

3

Yardley Yeadon @MichaelYeadon3 · 2m
I own an Audi S3 & for me, that particular model fails as a family car solely because it's a 3-door. The lowered suspension, 300bhp motor etc in no way disqualify it, and the RS4 likewise. The latter has easy access & good load space. The main thing against it for most families.,

..is that few people with a young family would wish to spend that much on a family car. With a few options it's knocking on £70K!

Must say, describing an fairly large estate car from a mainstream manufacturer as 'not a family car' is a weird hill to die in. I could understand if it was a 3 door BMW M4 but the whole purpose of RS4 is that it does everything.

1

[redacted] Jon Fisher @jonthepon · Aug 5
It passes NCAP with 5 stars, has 4 wheel drive, big boot and room for 5 seated, inc an adult behind me, and I'm 6'5. It has ralls for a roof rack and is homologated to take a tow hook. It's as practical as *any* mid sized family car, but just has powerful engine and nice interior

3

sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 5
And there are not more practical cars for the job? I agree with leather seats being the most practical but all other aspects make it more annoying to live with in my view. The price (not financial) you pay for big wheels etc is in poor comfort. Long drives become hard work. Enjoy

1

That's fair. I learned my lesson & chose 18" wheels on my S3. It's not a 'hard' as an RS3, but the latter is just so rigidly sprung on those big wheels that it would be massively jiggly on our East Kent rural roads. I still lust over the note of that sublime 5-cylinder motor!

The RS4 isa family car? Really? A performance engine, sports seats, etc etc. How does this make it a family car please?

10 1 7

Spun Keeboots @KeebootsSpun · Aug 4
Being as though the kids dont drive it I believe its down to the spacious interior, luxurious drive and such like making it suitable for a number of people (i.e.family) being able to enjoy long drives out.

1 1

sowerbob - 2 wheels good, brompton better @mnogogotin · Aug 4
A not that spacious
B stupidly hard ride all RS Audi's are infamous for
C long drives can be achieved in any car
D limited luggage space for a family with young kids

This is a penis enhancer for those who need it. Whis is insurance so high? Because of the carnage they cause.

2

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @mnogogotin @KeebootsSpun @AudiOfficial

Isn't the insurance expensive because it's much more likely to be stolen or vandalised & because expensive cars generally cost a lot to repair even minor damage. The spoilers are easy to catch & pls don't ask me how easily big wheels are to graunch. A grand a corner, easily.

3

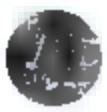
Tomáš Bohunĕk @BohunTo · 18h
Yes, a lot of people die on the roads because we have cars.
But how many would die if we didn't have cars? I don't think carriages were any safer or less polluting.



1

Jim de Maarne @saintjimjim · 18h
How is a carriage powered?

Obviously if we just used public transport, cycling and walking then we would be safer. Ridiculous to say otherwise

1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @saintjimjim @BohunTo and 2 others

The number of people killed annually on U.K. roads is approximately the same number of people who die each day in the same country. That's not to say we should dismiss RTAs, merely that perspective is essential.

Most of the worlds refugees are in developing countries as opposed to developed countries. If they can afford it, why can't we?
Lebanon has a population about 1/10 of ours & has been blighted by war & economic struggles. They've also managed to take in 1.5 million Syrian refugees

3

Yardley Yeadon @MichaelYeadon3 · 9h
Until not very long ago, Lebanon & Syria were one country. They are doing an incredible thing, no question. But your analogy fails, because the refugees & their temporary safe haven regard themselves as part of a wider, local community.

1

David @onthemoon69 · 9h
How does my analogy fail? How does the fact that they used to be one country change the fact that Lebanon is in a mess socially and economically but still manages to accept way more refugees than Britain?

1

Yardley Yeadon @MichaelYeadon3 · 9h
Ok boomer.

The problem is that it's not correct. The weight of evidence is that airborne transmission is unlikely. It's certainly not an important route of infection. Consensus is that the oral route predominates. This is why hand-washing is the only proven non-pharmaceutical intervention.

Lockdowns are ineffective in reducing spread, as well, at least as designed in U.K. Here, they've been 'leaky' arrangements. The bulk of transmission does not appear to be substantial between passing strangers who don't share an enclosed space or physical contact, unsurprising.

..their findings with other, substantial meta-analyses on masks, which are almost all a solid negative.
There's just one, large, randomised controlled trial, in Vietnam, which is on the effect of masks on transmission of respiratory viruses generally. That's a negative, too.

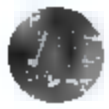
Governments are now mandating masks because, other than a lockdown, they have no other way of saying 'look, we're doing something." It's all they've got left.



Expect more stringent muzzle laws from Boris soon, possibly even later today.

3 3

Yardley Yeadon @MichaelYeadon3 · 23m
Lockdowns are ineffective in reducing spread, as well, at least as designed in U.K. Here, they've been 'leaky' arrangements. The bulk of transmission does not appear to be substantial between passing strangers who don't share an enclosed space or physical contact, unsurprising.

1 1

Yardley Yeadon
@MichaelYeadon3

Follow

Replying to @MichaelYeadon3 @northerness @ClarkeMicah

For those who doubt this, consider the transmission within hospitals & care homes. Then consider pubs, public transport & visits to others houses. I'm not at all sure we've established ANY outdoor community transmission between passing strangers. I'd surprised if it was common.

Gary Sidley #KBF @GarySidley · 3h
Given that the initial vaccine trials suggest that side effects of the vaccine will be a lot worse than a coronavirus infection, & any immunity conferred is likely to be partial at best, in a rationale world they should not be much demand for it. Hence why they will mandate it.

It's extremely unlikely. The prevalence of virus is now so low, & continuing to fall rapidly, that the chance of being in the same shop on same day with a 'case' is remote. That you might get infected is almost impossible in a brief visit & masks in any case make no difference.

And whats wrong with that? Thats precisely the state of the science as we speak.

Would you, if you were in mortal danger from the virus, entrust your life to the good-will, intellect, and reliability of an anonymous mass of random strangers?

1

Martin Gruffydd @MGruffydd · 2h
My position is simple, if we just don't know enough (we don't) , then err on the side of caution. If the masks are useless, the worst that's happened is I've looked a bit of a plonker for 10 minutes while buying milk. If they work, I've reduced the chances of spreading it.

3

Yardley Yeadon @MichaelYeadon3 · 2m
I expect we will have at least some avoidable deaths from mask related pulmonary infections. Dilution is a key principle in keeping safe, in this case, with clean air. Masks are rarely stored carefully when not in use. They will grow cultures in the weave, and quickly in summer.

3

Karl Schlunz @Teldiras · 2h
If the masks would do no harm I would agree with you.

The masks however do a lot of harm.

And for the vulnerable, the mask mandate makes no difference. On the contrary, it creates a false sense of safety which you can regularly observe in public.

1 3

Martin Gruffydd @MGruffydd · 2h
The biggest issue of all is low levels of compliance, on everything, be it handwashing, staying at home, social distancing or being asked to wear a mask. Everything has to be done as a package, not just the things we agree with. Peters stance just fosters non compliance

3

Yardley Yeadon
@MichaelYeadon3

Depending on how you look at the data & timings, it's entirely possible to conclude that not a single NPI which Govts have introduced have had any influence on the pandemic. Hand washing & distance excepted. Lockdown & masks - extremely thin evidence vs real harms.

Absolutely. If you read my post I say I, adding my professional expertise to his very well-informed opinion. So I agree with you. He also used to be among my local players when I lived & worked on the south coast.

1 1 1

Victoria #UsForThem @Vicster82 · 54m

Top guy and didn't deserve any of the hate he received.

1 1

Yardley Yeadon @MichaelYeadon3 · 46m

I wasn't aware he had had, what a horrible thing. Was it notionally because he looked at the pandemic with an unbiased mind & found it didn't match the panic?
Early on, I tried to reassure & tell others this was horrible, but would be speedily self-limiting. I was called Nazi.

2 1

Victoria #UsForThem @Vicster82 · 42m

Yes, he was just asking the most pressing and obvious questions in my view. I find it odd how you can't go against the narrative without facing a backlash if abuse.

It's far too late now. Almost everyone who's destined to die with or of Covid19 already has died. Virus prevalence is a small slice of 0.1% of the population. Of every 2000 people in U.K., 1999 are virus-free.

The RTPCR test was designed to sequence DNA, not detect infectious disease. Now they are pushing for more and more tests. This looks like they are DNA harvesting. Why?

Yes, and the inventor of the PCR technique, Kary Mullins, repeatedly observed that though it does selectively detect viral nucleotide sequences, it cannot distinguish fragments of 'dead virus' from this with an active infection. In no way is it a 'gold standard' test.

Furthermore, it's a cyclical amplification technique. I've seen up to 30 cycles used, which them exposes a serious weakness of PCR: run it a sufficiently large number of cycles & false positive rate climbs unacceptably. Ideally you want a clear gel band after a low no of cycles.

There is no evidence of rising community transmission. The reported increasing numbers of 'cases' are in younger cohorts who are not made ill by the virus & were found only via mass population screening. Hospitalisation is falling, ditto ICU & deaths. No U.K. reversion.

I agree. Do you have a link to the latest ONS survey? Is that the one which uses a symptoms algo, or the rare large cross section where PCR is used?
I have looked at the symptoms algo & don't believe it's reliably able to distinguish Covid19 among other respiratory viruses.

While I think that's expensive it absolutely doesn't account for the conspiracy people imply. Reason: even big pharma has seen sizeable cuts to sales & income while costs increased. Pandemics don't make much money, net/net, even for drug companies.

3 1

Kazi54 @KarenJukes2 · 2h

Don't you think it's Gates trying to become even more richer !! And we have a drug, which is cheaper , that Drs have been silenced on that works ? Just sounds all money-oriented ..

No, I don't think that. You're giving one rich guy far too much credit for controlling FDA decisions, too. Some doctors are pushing some types of treatment (& also gave a financial interest) while others are dubious about efficacy & safety. There's room for vaccines, bios & drugs

...viral RNA appears in aerosols small enough to be respirable (5 thousandths of a mm), but not intact, infectious virus. WHO know this full well. It's in their current guidance, June 29 2020, which I've just read & which hasn't changed. See page 4. apps.who.int/iris/rest/bits...

1 1 5

Yardley Yeadon @MichaelYeadon3 · Jul 8

Later in, one scientist "criticised the WHO's panel for assessing infection risk, saying it was lacking experts in aerosol transmission".
This is absolutely shocking. I've spent 30 years in R&D in areas related to therapeutic aerosols for lung diseases. I understand why it's...

1 2 6

Yardley Yeadon @MichaelYeadon3 · Jul 8

...unlikely that the aerosol route of infection occurs at all (evidence to date speaks against it) & it's definitely not an important route.
Please, everyone, don't allow MSM force politicians into stupid & unhelpful reactions. That way madness lies.

Red Roger LFC #JFT96 Champions Asterix my arse! @rogerpsan · 20m
Rubbish. Locally perhaps. Very few cases in Bromley per day. Many areas are reporting 0 cases for several days in a row. That does not mean that community transmission has stopped. Don't be so blinkered

1

Yardley Yeadon @MichaelYeadon3 · 13m
It has almost stopped & that's from SAGE. Yesterday, Prof Ferguson told BBCR4 that R was at present around 0.2, meaning for 5 infected subjects just one infects just one other person. In another small number of cycles, it will disappear, won't it? It's been clear why for weeks.

2

Red Roger LFC #JFT96 Champions Asterix my arse! @rogerpsan · 9m
900 cases a day is not "Almost stopped" Let me guess, you're not wearing masks or social distancing then..

Masks are wholly without benefit to wearer or those around them. I gesture with mine to get to unavoidable shops such as pharmacy but otherwise wholly avoid such settings. Distancing is much better. It's highly infectious but contact with people or their secretions is required.

The data are noisy, by their admission. So the estimate could double yet not indicate a real increase. Also, where's the section stating how many people had how many tests? The % positive? How many based on symptoms in the App? I wish they'd do one representative sample per week!

We can tweak the IFR a little, but it's hundred of thousands of new, individuals getting infected every day in mid to late March. I hope this context is useful in appreciating why I'm relieved at a few thousand a day now. It's under 1% of peak & matches death rate, also under 1%.

The data are noisy, by their admission. So the estimate could double yet not indicate a real increase. Also, where's the section stating how many people had how many tests? The % positive? How many based on symptoms in the App? I wish they'd do one representative sample per week!

2

P @PDST123 · 36m
% tests accounted for. You can cast aspersions on all data if you try hard enough yet we have to use most reliable data we have to inform public health choices. The range is accurate to a 95% statistically significant confidence level & methodology consistent so pretty reliable.

1

Yardley Yeadon @MichaelYeadon3 · 1m
That's fine, but humour me by looking at that 95% CI. It is wide, isn't it? The lower limit is less than last weeks mean? So it might be down, not up. Even the report doesn't claim it's really up. In any case, it cannot rise for long, for the same reason it's fallen hard so far:

...too few people remaining susceptible such that each infected person is less & less likely to infect someone. That's why R is around 0.2 & it's all moving down.

Moriarty @LeProfMoriarty · 9h

GlaxoSmithKline and Gates Foundation will be charging the govt (actually the taxpayer) £477 per person for vaccine. In the UK alone that would be £32 billion based on population of 67m. Getting clearer?

119 784 1.1K

Yardley Yeadon @MichaelYeadon3 · 4h

While I think that's expensive it absolutely doesn't account for the conspiracy people imply. Reason: even big pharma has seen sizeable cuts to sales & income while costs increased. Pandemics don't make much money, net/net, even for drug companies.

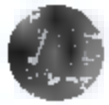
1

Yardley Yeadon @MichaelYeadon3 · 26m
..death was preceded by 400 infections, one of which proved fatal (1:400 is 0.25%). At peak, we had over 1000 deaths per day for a while. Each one was the sad outcome of 400 separate battles with the virus. So 1000 deaths on a day means 400,000 infections around 3-4weeks earlier.

1



Yardley Yeadon @MichaelYeadon3 · 25m
We can tweak the IFR a little, but it's hundred of thousands of new, individuals getting infected every day in mid to late March. I hope this context is useful in appreciating why I'm relieved at a few thousand a day now. It's under 1% of peak & matches death rate, also under 1%.

2

P @PDST123 · 6m
400000 daily deaths would equate to 12 million infections in one month. Patently absurd I'm afraid sir.

World testing #s to try and win a U.K. point? Facts are that our #s of tests have climbed substantially even as the real prevalence of virus has decayed. The positive rate in the test continues to fall. And most testees are young & symptom free. SAGE is anything but.

2 1

P @PDST123 · 2h

Yes what do SAGE and WHO experts know? I'm just over to Youtube to find some real scientists...

1

Yardley Yeadon

There is absolutely no peer reviewed scientific data on T-Cell immunity that shows it conferred immunity. You are straying into areas you know little of. The 400x figure is of no value. It's a presumption based on flawed assumptions. This is going from bad to worse for you.

1

Yardley Yeadon
@MichaelYeadon3

I agree, it's literally impossible for that to have been done yet.
However it does confer immunity vs SARS-1.
As a biologist do you expect it to follow or confer no protection?
Also, it's not important whether it's 100% immunity. Just "not severe" when infected is enough.
